

Elfin-EW1X

RS232/RS485 to Wi-Fi

User Manual

V 1.3

Overview of Characteristic

- ✧ Support 802.11bgn Wireless Standard
- ✧ Support TCP/UDP/Telnet /Modbus TCP Protocol
- ✧ Support RS232/RS485 to Wi-Fi Conversion, Serial Speed Up to 230400 bps
- ✧ Support STA/AP/AP+STA Mode
- ✧ Support SmartLink V8 Smart Config (Provide APP)

- ✧ **Support Easy Configuration Through Web Interface or PC IOTService Tool**
- ✧ **Support Security Protocol Such As TLS/AES/DES3**
- ✧ **Support Webpage OTA Wirelss Upgrade**
- ✧ **Support Internal PCB Antenna**
- ✧ **Wide DC Input**
 - **Elfin-EW10, Elfin-EW11, Elfin-EW10-0, Elfin-EW11-0: 5~18VDC**
 - **Elfin-EW10A-0, Elfin-EW11A-0, Elfin-EW10A-0, Elfin-EW11A-0: 5~36VDC**
- ✧ **Size: 61 x 26 x 17.8 mm (L x W x H)**
- ✧ **FCC/CE/SRRC/IC Certificated**

1. PRODUCT OVERVIEW

1.1. General Description

The Elfin-EW1X provides RS232/RS485 interface to Wi-Fi connectivity. The Elfin-EW1X integrate TCP/IP controller, memory, high-speed serial port and integrates a fully developed TCP/IP network stack and mbed OS. Elfin-EW1X also support remotely configure, monitor with IOTService.

The Elfin-EW1X using highly integrated hardware and software platform, it has been optimized for all kinds of applications in the industrial control, smart grid, personal medical application and remote control that have lower data rates, and transmit or receive data on an infrequent basis.

The Elfin-EW1X integrates all serial to Wi-Fi functionality with 61 x 26 x 17.8mm size.

1.2. Device Parameters

Table1. Elfin-EW1X Technical Specifications

Item	Parameters
System Information	
Processor/Frequency	160MHz
Flash/SDRAM	2MB/352KB
Operating System	mbed
Network Protocol	
Network Protocol	IP, TCP, UDP, DHCP, DNS, HTTP Server/Client, ARP, BOOTP, AutoIP, ICMP, Web socket, Telnet, uPNP, NTP, Modbus TCP
Security Protocol	TLS v1.2 AES 128Bit DES3
Wi-Fi Interface	
Standard	802.11 b/g/n
Frequency	2.412GHz-2.484GHz
Network Mode	STA/AP/STA+AP
Security	WEP/WPAPSK/WPA2PSK
Encryption	WEP64/WEP128/TKIP/ AES
Tx Power	802.11b: +18dBm (Max.) 802.11g: +16dBm (Max.) 802.11n: +15dBm (Max.)
Rx Sensitive	802.11b: -89dBm 802.11g: -81dBm 802.11n: -71dBm
Antenna	Internal:PCB
Serial Port	
Port Number	EW10:1 RS232 EW11:1 RS485
Data Bits	7,8

Stop Bit	1,2
Check Bit	None, Even, Odd
Baud Rate	TTL: 300 bps~230400 bps
Flow Control	No Flow Control Software Xon/ Xoff flow control
Software	
Web Pages	Http Web Configuration Customization of HTTP Web Pages
Configuration	Web CLI XML import Telnet IOTService PC Software
Basic Parameter	
Size	61 x 26 x 17.8 mm
Operating Temp.	-40 ~ 85°C
Storage Temp.	-45 ~ 105°C, 5 ~ 95% RH (no condensation)
Input Voltage	Elfin-EW10, Elfin-EW11, Elfin-EW10-0, Elfin-EW11-0: 5~18VDC Elfin-EW10A-0, Elfin-EW11A-0, Elfin-EW10A-0, Elfin-EW11A-0: 5~36VDC
Working Current	~200mA
Power	<700mW

1.3. Key Application

The Elfin-EW1X device connects serial device to networks using the TCP/IP protocol:

- Remote equipment monitoring
- Asset tracking and telemetry
- Security Application
- Industrial sensors and controls
- Medical devices
- ATM machines
- Data collection devices
- Universal Power Supply (UPS) management units
- Telecommunications equipment
- Data display devices
- Handheld instruments
- Modems
- Time/attendance clocks and terminals

2. HARDWARE INTRODUCTION

The Elfin-EW1X unit is a complete solution for serial port device connecting to network. This powerful device supports a reliable and proven operating system stored in flash memory, an embedded web server, a full TCP/IP protocol stack, and standards-based (AES) encryption.

Elfin-EW1X serial server for data transfer via Wi-Fi, which makes the data transformation very simple.

Figure 1. Elfin-EW10 Appearance

Figure 2. Elfin-EW11 Appearance

2.1. Elfin-EW10 Pins Definition

Figure 3. Elfin-EW10 RJ45 Interface Pin

Table2. Elfin-EW10 Interface Definition

Pin	Description	Net Name	Signal Type	Comment
1	GPIO	GPIO	IO	Reserved
2	GPIO	GPIO	IO	Reserved
3	GPIO	GPIO	IO	Reserved
4	Restore to Factory	nReload	I	Default pulled-high. Detailed functions see <Notes>
5	UART1_TXD	UART1_TXD	O	RS232 Voltage
6	UART1_RXD	UART1_RXD	I	RS232 Voltage
7	Power VCC	VCC	Power	5~18VDC
8	Power GND	GND	Power	
9	Green LED Net Status	Net	O	Boot On: Power is OK. 0.1s Off -> 0.1s On: SmartLink Config Mode 0.3s Off -> 3s On: STA mode connect to router or AP mode being connected by other STA. 0.3s Off -> 0.3s On: No Wi-Fi Connection
10	Amber LED Data Transfer	Active	O	Off: No data transfer 0.3s Off -> 0.9s On: UART TX Output 0.3s Off -> 0.3s On: UART RX Receive On: UART bidirection.

2.2. Elfin-EW11 Pins Definition

Figure 4. Elfin-EW11 RJ45 Interface Pin

Table3. Elfin-EW11 Interface Definition

Pin	Description	Net Name	Signal Type	Comment
1	Debug TX	UART2_TXD	O	TTL voltage

Pin	Description	Net Name	Signal Type	Comment
2	Debug RX	UART2_RXD	I	TTL voltage
3	GPIO	GPIO	IO	Reserved
4	Restore to Factory	nReload	I	Default pulled-high. Detailed functions see <Notes>
5	UART1_TXD	RS485_A+	IO	RS485 A+
6	UART1_RXD	RS485_B-	IO	RS485 B-
7	Power VCC	VCC	Power	5~18VDC
8	Power GND	GND	Power	
9	Green LED Net Status	Net	O	Boot On: Power is OK. 0.1s Off -> 0.1s On: SmartLink Config Mode 0.3s Off -> 3s On: STA mode connect to router or AP mode being connected by other STA. 0.3s Off -> 0.3s On: No Wi-Fi Connection
10	Amber LED Data Transfer	Active	O	Off: No data transfer 0.3s Off -> 0.9s On: UART TX Output 0.3s Off -> 0.3s On: UART RX Receive On: UART bidirection.

<Notes>

I — Input; O — Output; I/O: Digital I/O; Power—Power Supply

nReload Pin (Button) function:

1. After module is powered up, short press this button (0.2< “Low” <1.5s) and loose to make the module go into “SmartLink“ config mode, waiting for APP to set password and other information. (See Appendix to download SmartLink APP)
2. After module is powered up, long press this button (“Low” > 4s) and loose to make the module recover to factory setting.

UART1 Debug :

1. Is used for debug log or firmware program. Baud Rate is 921600.

2.3. RS232 Interface

Device RS232 does not support hardware flow control. The physical voltage is about $\pm 7V$.

2.4. RS485 Interface

RS485 use two wire links, A(DATA+), B(DATA-). Connect A(+) to A(+), B(-) to B(-) for communication. Suggest to connect GND together when interference is very severe.

The RS485 interface support maximum 32 485 device, device. The cable maximum length is 1200 meters. Need to add 120Ohm terminal resistor for over 300 meters.

2.5. Mechanical Size

The dimensions of Elfin-EW1X are defined as following picture (mm):

Figure 5. Elfin-EW1X Mechanical Dimension

2.6. RJ45 8PIN Connector

2.14. EVK

EVK include one Elfin device, one RJ45 Connector and one screw driver.

Figure 20. EVK Package

2.15. Order Information

Base on customer detailed requirement, Elfin-EW1X provide different configuration version, Details as below:

Function Model	Power Input	Type	Antenna	UART	UART Number
Elfin-EW10	5~18VDC	Wi-Fi	Internal	RS232	1
Elfin-EW11	5~18VDC	Wi-Fi	Internal	RS485	1
Elfin-EW10-0	5~18VDC	Wi-Fi	External SMA	RS232	1
Elfin-EW11-0	5~18VDC	Wi-Fi	External SMA	RS485	1
Elfin-EW10A	5~36VDC	Wi-Fi	Internal	RS232	1
Elfin-EW11A	5~36VDC	Wi-Fi	Internal	RS485	1
Elfin-EW10A-0	5~36VDC	Wi-Fi	External SMA	RS232	1
Elfin-EW11A-0	5~36VDC	Wi-Fi	External SMA	RS485	1

Figure 21. Elfin-EW1X Product Order Information

3. NETWORK STRUCTURE

3.1. Wireless Network

Product can be set as a wireless STA and AP as well. And logically, it supports two wireless interfaces, one is used as STA and the other is AP. Other STA devices can join into the wireless network through AP interface. So the it can provide flexible networking method and network topology.

<Introductions>

AP: Wireless access point which is the central joint. Usually, wireless router is a AP, other STA devices can connect with AP to join the network.

STA: Wireless station which is terminal of a wireless network. Such as laptop and pad etc.

3.1.1. AP Network

HF2211 can construct a wireless network as AP. All the STA devices will consider the AP as the centre of the wireless network. The mutual communication can be transponded by AP, shown as follow:

Figure 22. General AP Network

3.1.2. STA Wireless Network

Take the following picture as example. When router works in AP mode, HF2211 connects to the user's devices by RS232/RS485 interface. In this topology, the whole wireless network can be easily stretched.

Figure 23. STA Application

3.1.3. AP+STA Wireless Network

HF2211 can support AP+STA method. It can support AP and STA interface at the same time. Shown as follow:

Figure 24. AP+STA Wireless Network

In this picture, open the AP+STA function and the STA interface can be connected to the remote server by the router. Similarly, the AP interface can also be used. Phone/PAD can be connected to the AP interface and to control the serial devices or set itself.

Through AP+STA function, it is convenient to use Phone/PAD to monitor the user's devices and not change its original settings.

Notes that:

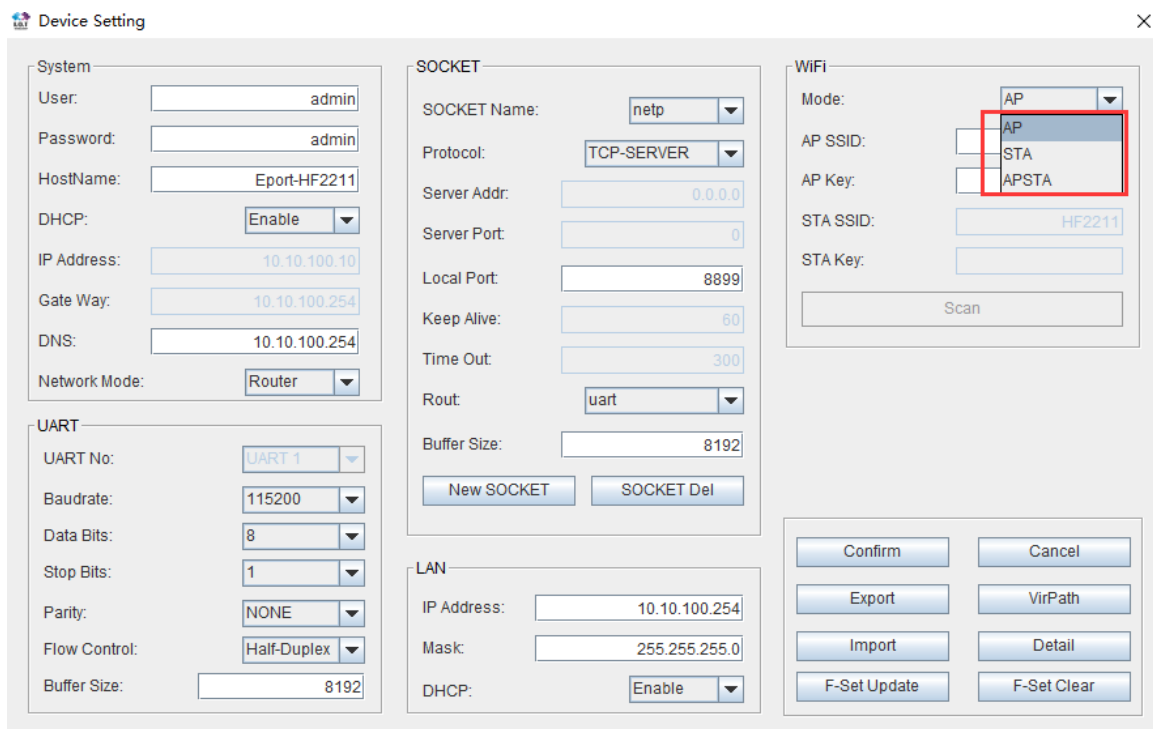

When the AP+STA function is opened, the STA interface needs to connect to other router. Otherwise, STA interface will endlessly scan the router information nearby. When it is scanning, it will bring bad effects to the AP interface, like losing data etc.

AP and STA parts must set to the different sub-network for the product working as APSTA mode.

Does not support Wi-Fi repeater function that means device works in AP+STA(STA connects to router), PC connects to device AP, but can not access to internet (If need this router function, use HF2211/HF2221)

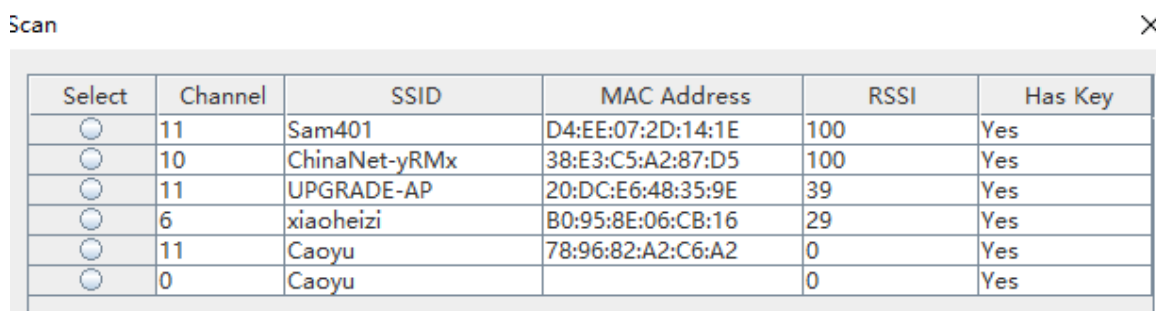

3.1.4. IOTService Software

Open the IOTService after connect to the AP hotspot generated by HF2211 or connect to Product Ethernet port to PC, then configure the parameter.

The screenshot shows the 'Device Setting' window with the 'WiFi' tab selected. The 'Mode' dropdown is open, showing options: AP, STA, and APSTA. The 'APSTA' option is highlighted with a red box. Other visible settings include: User: admin, Password: admin, HostName: Eport-HF2211, DHCP: Enable, IP Address: 10.10.100.10, Gate Way: 10.10.100.254, DNS: 10.10.100.254, Network Mode: Router, UART No: UART 1, Baudrate: 115200, Data Bits: 8, Stop Bits: 1, Parity: NONE, Flow Control: Half-Duplex, Buffer Size: 8192, SOCKET Name: netp, Protocol: TCP-SERVER, Server Addr: 0.0.0.0, Server Port: 0, Local Port: 8899, Keep Alive: 60, Time Out: 300, Rout: uart, Buffer Size: 8192, LAN IP Address: 10.10.100.254, Mask: 255.255.255.0, DHCP: Enable. Buttons at the bottom include Confirm, Cancel, Export, VirPath, Import, Detail, F-Set Update, and F-Set Clear.

Figure 25. Configure Wi-Fi Parameter

The screenshot shows the 'Scan' window with a table of detected Wi-Fi networks. The table has columns: Select, Channel, SSID, MAC Address, RSSI, and Has Key.

Select	Channel	SSID	MAC Address	RSSI	Has Key
<input type="radio"/>	11	Sam401	D4:EE:07:2D:14:1E	100	Yes

1. INTRODUCTION

Elfin-EW1X, HF2211S, Protoss-PW1X products software function is the same (integrate our HF-LPT230 module, talk to our sales if need modules only), but with different hardware interface and size. Here has a brief description of these products' hardware, and take EW for example of software introduction.

All tools can be download at following link:

http://www.hi-flying.com/index.php?route=download/category&path=1_4

1.1. Elfin-EW1X EVK

Elfin-EW10/Elfin-EW10-0 is RS232 interface and Elfin-EW11/Elfin-EW11-0 is RS485 interface. The EVK include the following attachment.

- Elfin-E1WX products
- Screw driver
- RJ45 connector(4PIN or 8PIN)

1.2. Elfin-EW10 4PIN Connector

1.3. Elfin-EW11 4PIN Connector

1.4. Elfin-EW10 8PIN Connector

1.5. Elfin-EW11 8PIN Connector

1.6. Elfin-EW10/EW11 RJ45 Cable

The RJ45 cable can be done as following picture.

1.7. EW10 Interface Conversion Cable

1.8. EW11 Interface Conversion Cable

1.9. HF2211S Hardware

1.10. Protoss-PW11 Hardware

2. HARDWARE INTRODUCTION

2.1. Power Supply

- **EW1X**

DC 5~18VDC@5W.

Note: USB is not enough for power supply.

- **HF2211S**

DC 5~36VDC@1A.

- **PW1X**

-H AC Version, 100~240VAC

-M DC Version, 9~48VDC@1A

2.2. Power Supply

See products user manual.

2.3. Interface Connection

Elfin-EW10 is RS232, 7V voltage, need to connect with Pin5(TX), Pin6(RX) and Pin8(GND).

Elfin-EW11 is RS485, use Pin5(A+), Pin6(B-), GND also can be connected in some extreme condition.

3. INITIAL SETUP

HF Products provide multiple methods to config, webpage and IOTService tools.

Webpage is easy to use, but only for local setup and can not manage multiple device, recommend to use IOTService tools.

3.1. Webpage Set

Power on product:

- EW1X green LED will be repeat flash on 0.3s, then off 0.3s, indicate it works normally.
- HF2211S Link LED will be repeat flash on 0.3s, then off 0.3s, indicate it works normally.
- PW1X Net LED will be repeat flash on 0.3s, then off 0.3s, indicate it works normally.

PC Wi-Fi to search AP, different products with different SSID, XXXX is the end 4 characters of MAC.

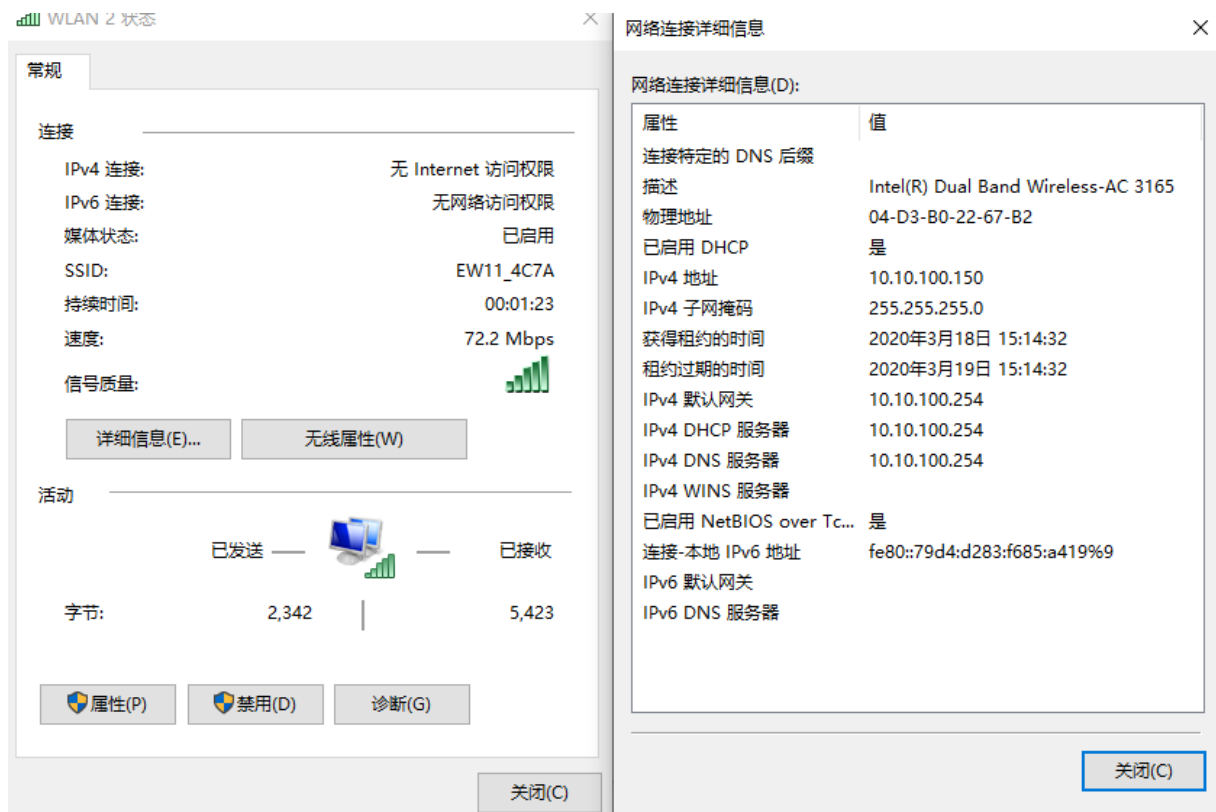

- EW1X SSID is EW10_XXXX or EW11_XXXX.
- HF2211S SSID is HF2211S_XXXX
- PW1X SSID is PW11_XXXX

Set PC IP with Auto DHCP.

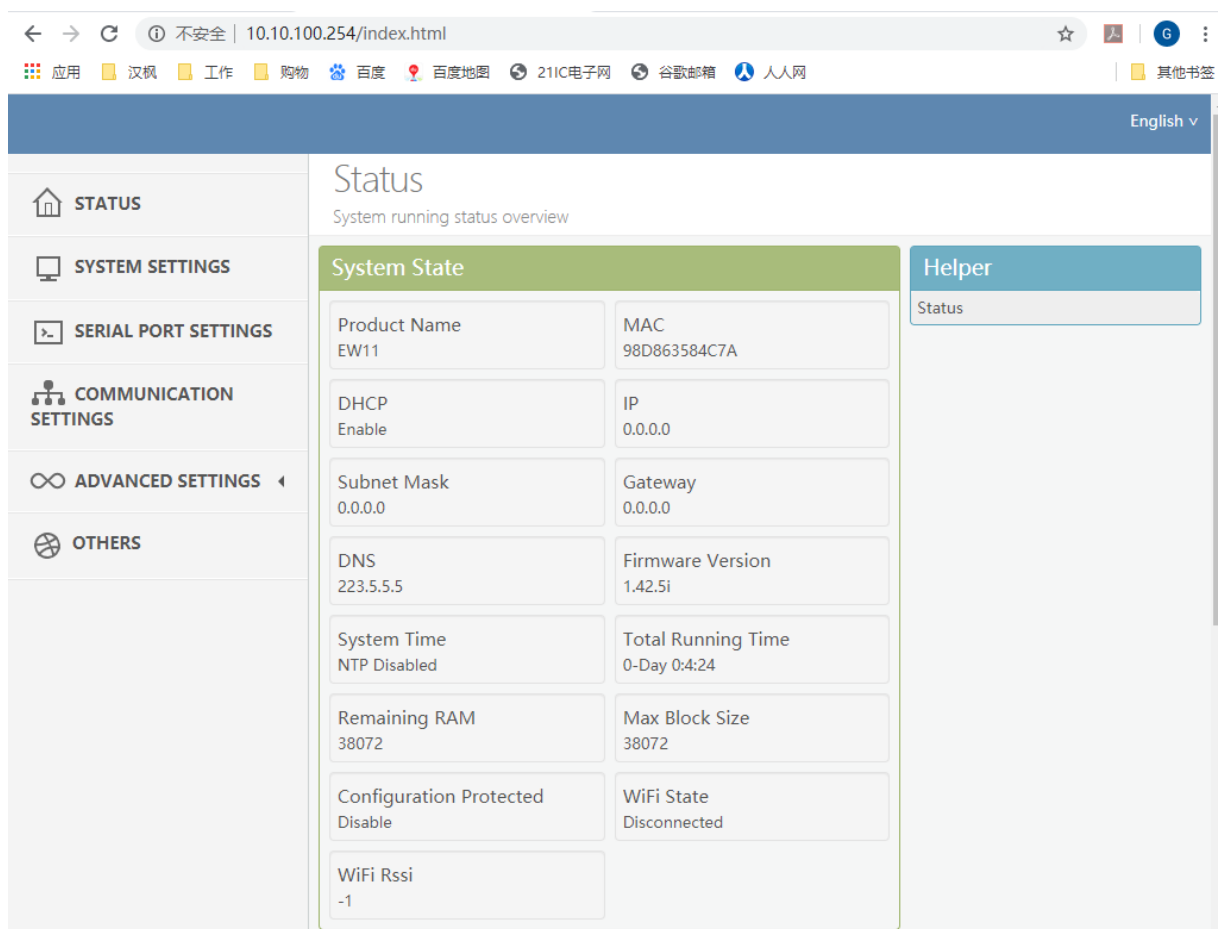

PC Wi-Fi connect to products and got IP as following picture

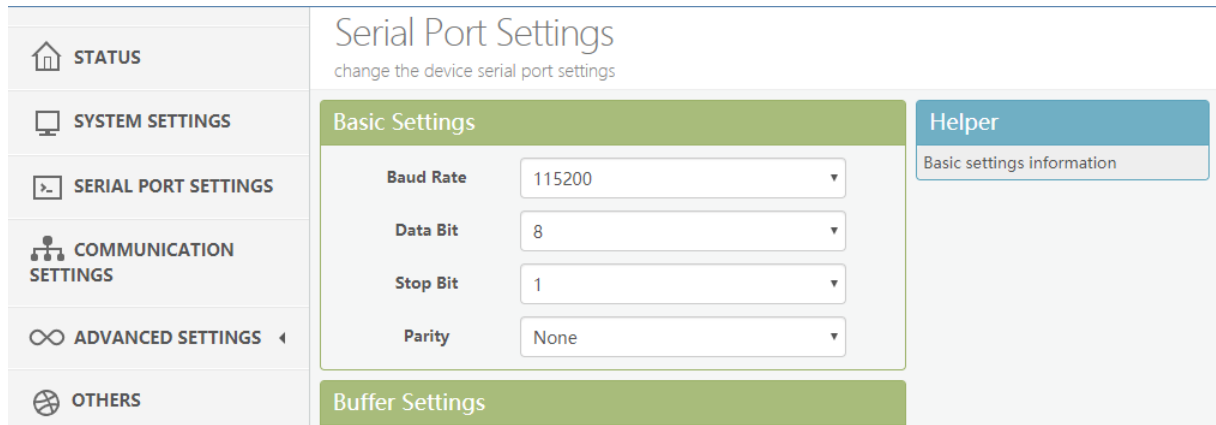

Browser input 10.10.100.254, input default user name and password with admin/admin to login in. The main page is as following.

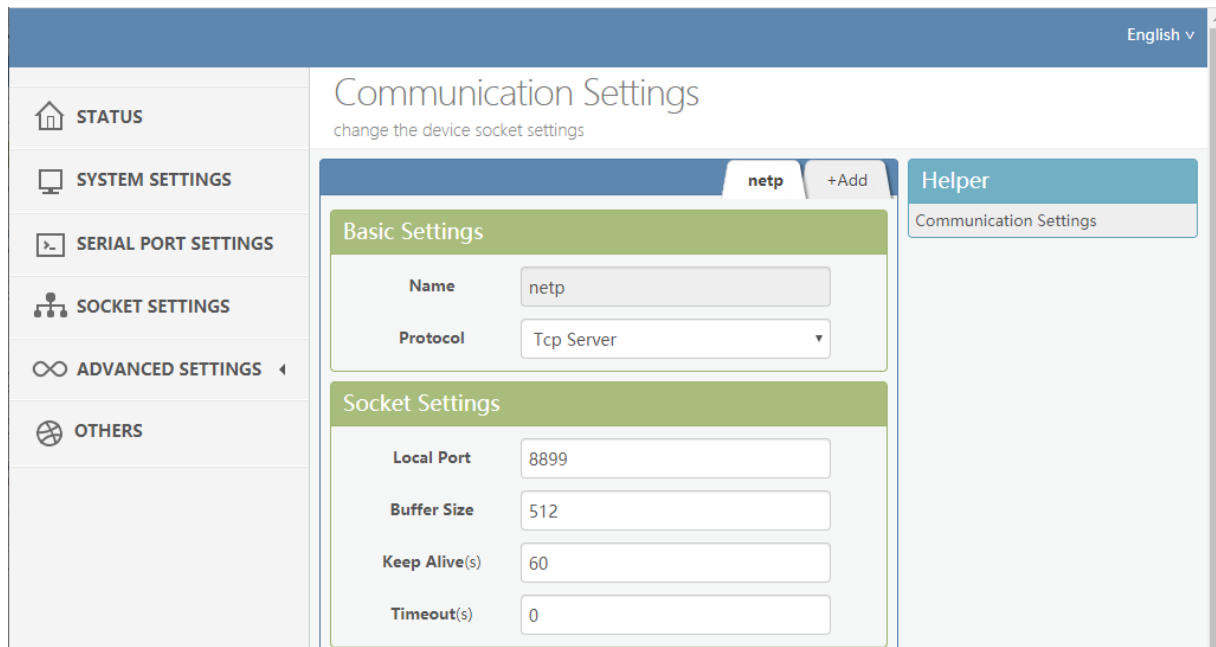

Default UART parameters is as following.

The screenshot shows the 'Serial Port Settings' web interface. On the left is a sidebar with navigation options: STATUS, SYSTEM SETTINGS, SERIAL PORT SETTINGS (selected), COMMUNICATION SETTINGS, ADVANCED SETTINGS, and OTHERS. The main content area is titled 'Serial Port Settings' with the subtitle 'change the device serial port settings'. It contains two sections: 'Basic Settings' and 'Buffer Settings'. The 'Basic Settings' section has four dropdown menus: Baud Rate (115200), Data Bit (8), Stop Bit (1), and Parity (None). On the right, there is a 'Helper' tab with a link for 'Basic settings information'.

Default socket parameters is as following.

The screenshot shows the 'Communication Settings' web interface. The sidebar is similar to the previous one, but 'SOCKET SETTINGS' is selected. The main content area is titled 'Communication Settings' with the subtitle 'change the device socket settings'. It features a tabbed interface with 'netp' selected and a '+Add' button. The 'Basic Settings' section includes 'Name' (netp) and 'Protocol' (Tcp Server). The 'Socket Settings' section includes 'Local Port' (8899), 'Buffer Size' (512), 'Keep Alive(s)' (60), and 'Timeout(s)' (0). A 'Helper' tab on the right has a link for 'Communication Settings'. The top right corner of the interface shows 'English' with a dropdown arrow.

Products by default works as AP mode, if need to set it connect to router, set it to STA or AP+STA working mode as following. Select the scanned list and input the router password.

Note: setting is valid after reboot.

Basic Settings

If upgrade firmware at the following position.

There is another internal webpage for upgrade the firmware and webpage (external config webpage as above, this source code is open at our website for customer to change). Login with IP/hide.

Webpage source file:

<http://www.hi-flying.com/download-center-1/application-notes-1/download-item-iot-device-webpage-source-code>

3.2. IOTService Set

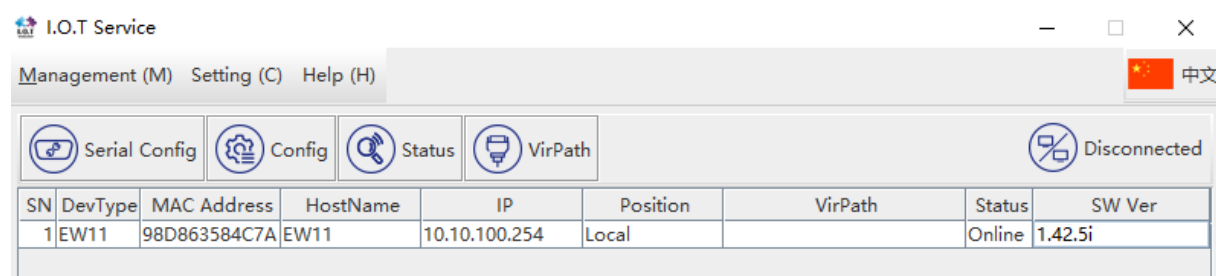

IOTService is simple to manage the products, config and even communicate with it.

Download address:

<http://www.hi-flying.com/download-center-1/applications-1/download-item-iot-service>

Install IOTService and register account in the IOTBridge cloud(<http://bridge.iotworkshop.com/>) according to that tools doc.

PC connect to products AP(Same as previous chapter), and open tools, The device will be shown in IOTService.

Note: See IOTService doc for more detailed usage, here just simply use it.

Double click the product list to see the device status.

Device Status

Product ID: EW11

4. SERIAL PORT SETTINGS

4.1. Serial Port Tool SecureCRT

Open SecureCRT find an executable program, click Open.

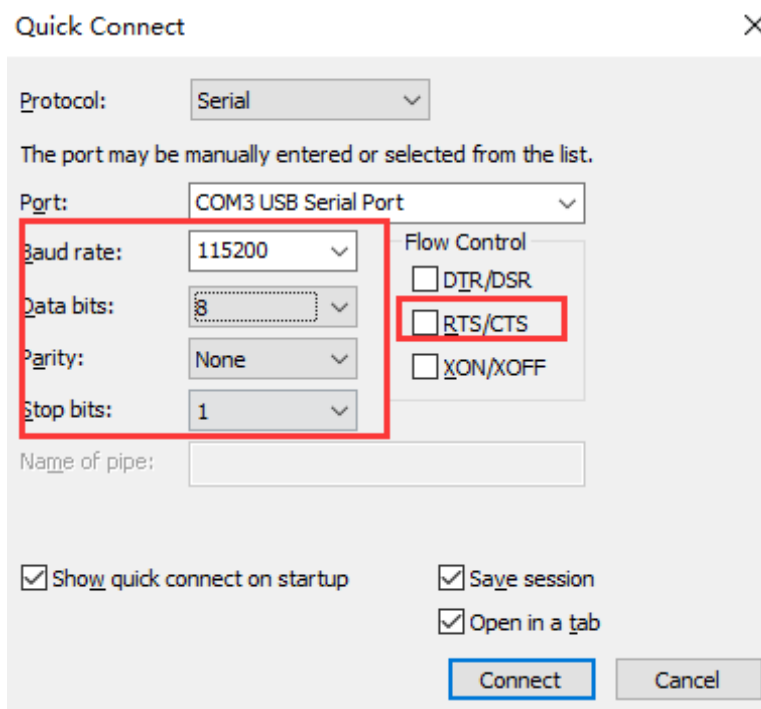

Click the Quick Connect button to create a connection.

4.2. Setting Serial Port Parameters

Protocol: Serial

Port: The port that the computer is actually connected to (see "My Computer"-> "Device Manager"-> "Ports (COM and LPT)", as shown in the figure.

Note: The default serial port data of the device is as shown in the figure above. Users can modify the working parameters of the product by using IOTService.

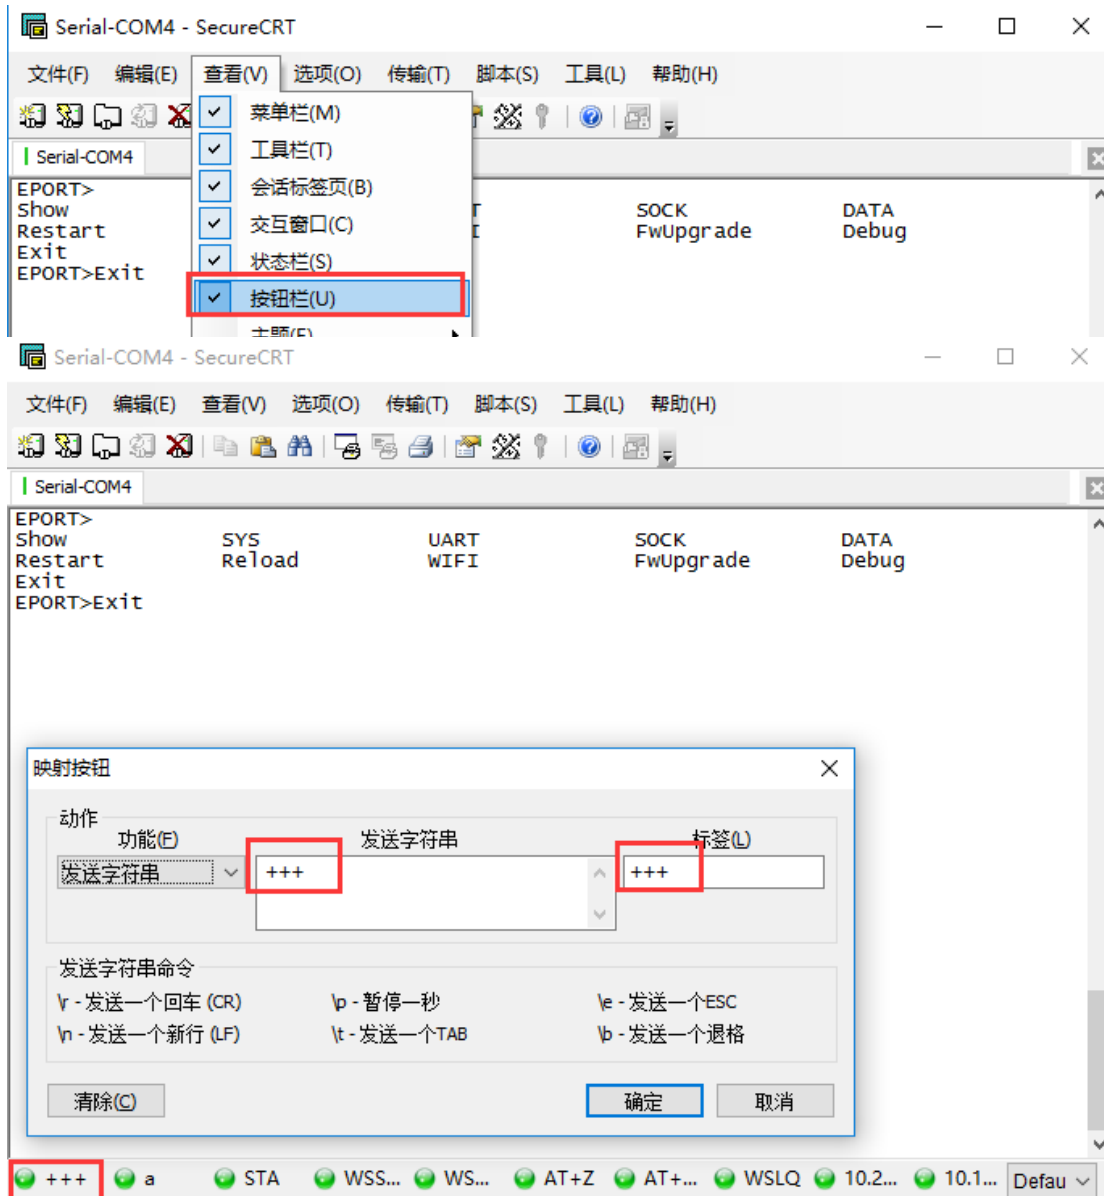

4.3. Cli Instruction Mode

Data transmission needs to be in the transparent transmission mode (the default transparent transmission mode upon power-on). If you need to enter the Cli command mode for configuration, you can do as follows.

- Serial port mode.

Set the parameters of the SecureCRT serial port software according to the above.

Add "+++" button command to the button bar.

Click the button to send the corresponding data. When the interface displays "EPORT>", you have entered the CLI command mode.

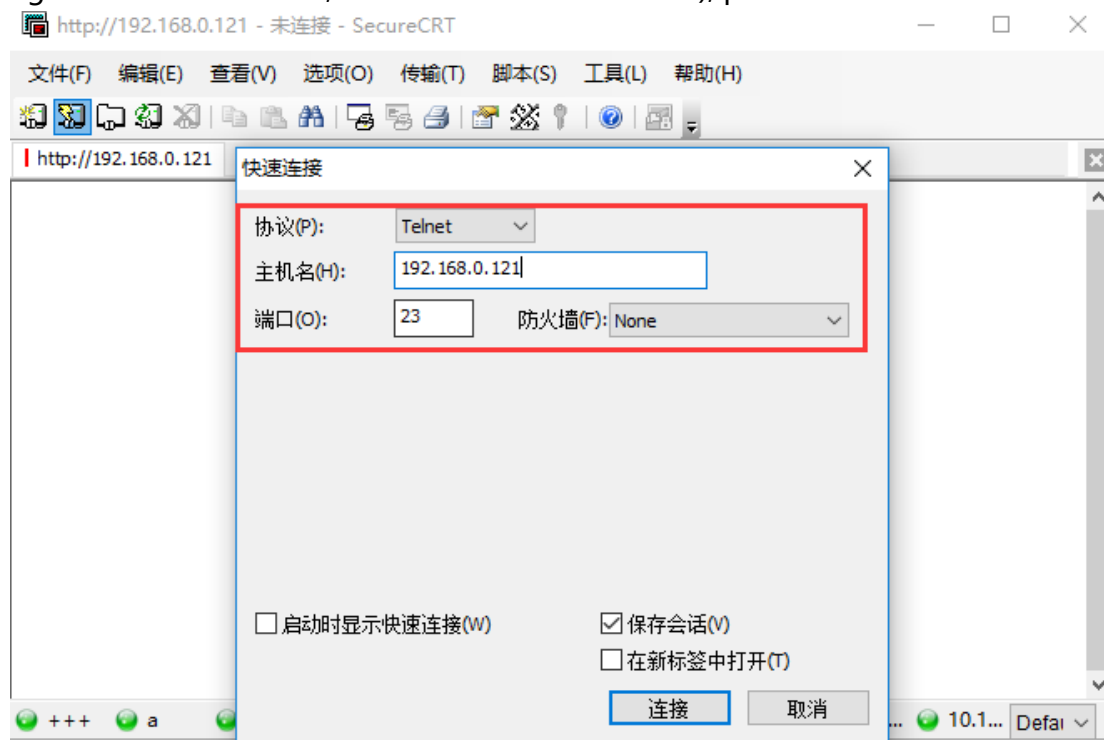

Note:

Any serial tool can do this. Sending "+++" must be a continuous package of data, and there can be no other data before and after (such as carriage return and line feed).

- Telnet mode.

Step 1: Enter the IP address of the device (the IP address can be obtained by searching through the IOTService tool, which will be detailed later), port 23.

Step 2: The default login name and password are both admin, then "EPORT>" is displayed, and you have logged in to the Cli command mode.

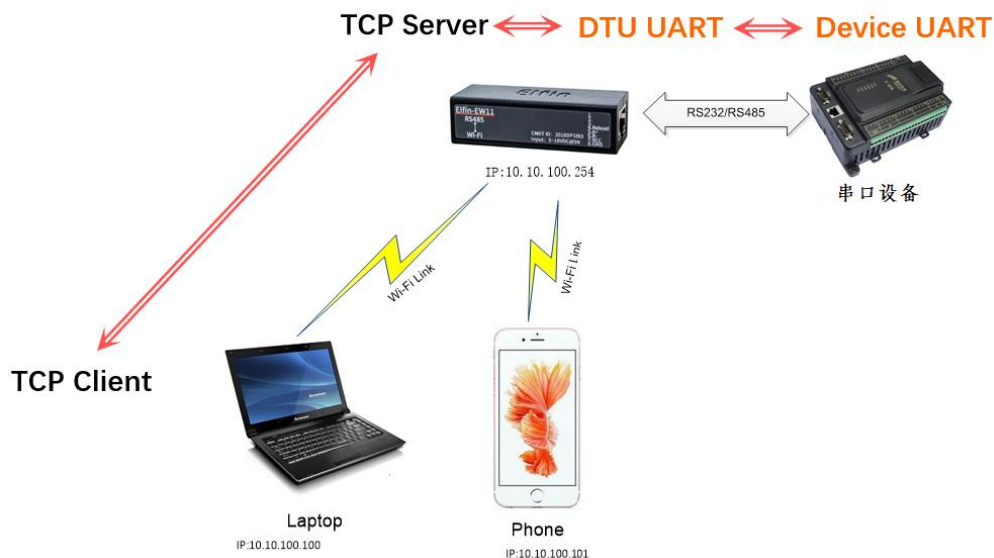

5. TEST EXAMPLE

Elfin-EW1X use TCP/IP protocol for communication. There is two main parameters one for IP address and another for port number.

5.1. AP Wireless Networking

Product works in AP mode. All other STA devices connect to product AP. (Product AP does not support route function, so the STA can not transfer data to each other) The structure is shown as below:

Step 1: The product default AP SSID is "EW1X_+MAC(last 4 characters)". It can also search by cli "Show" command. Figure is as below:

```

===WIFI Status===
Mode:STA
AP SSID:EW10_C69A
Hide AP SSID:off
Disconnected

STA SSID:upd
Connected,7C:B5:40:4F:B2:CD

EPORT>

```

Step 2: Set PC IP to DHCP or static IP with (10.10.100.XXX, subnet:255.255.2550.0, gateway:10.10.100.254), PC connect to product AP as following picture.

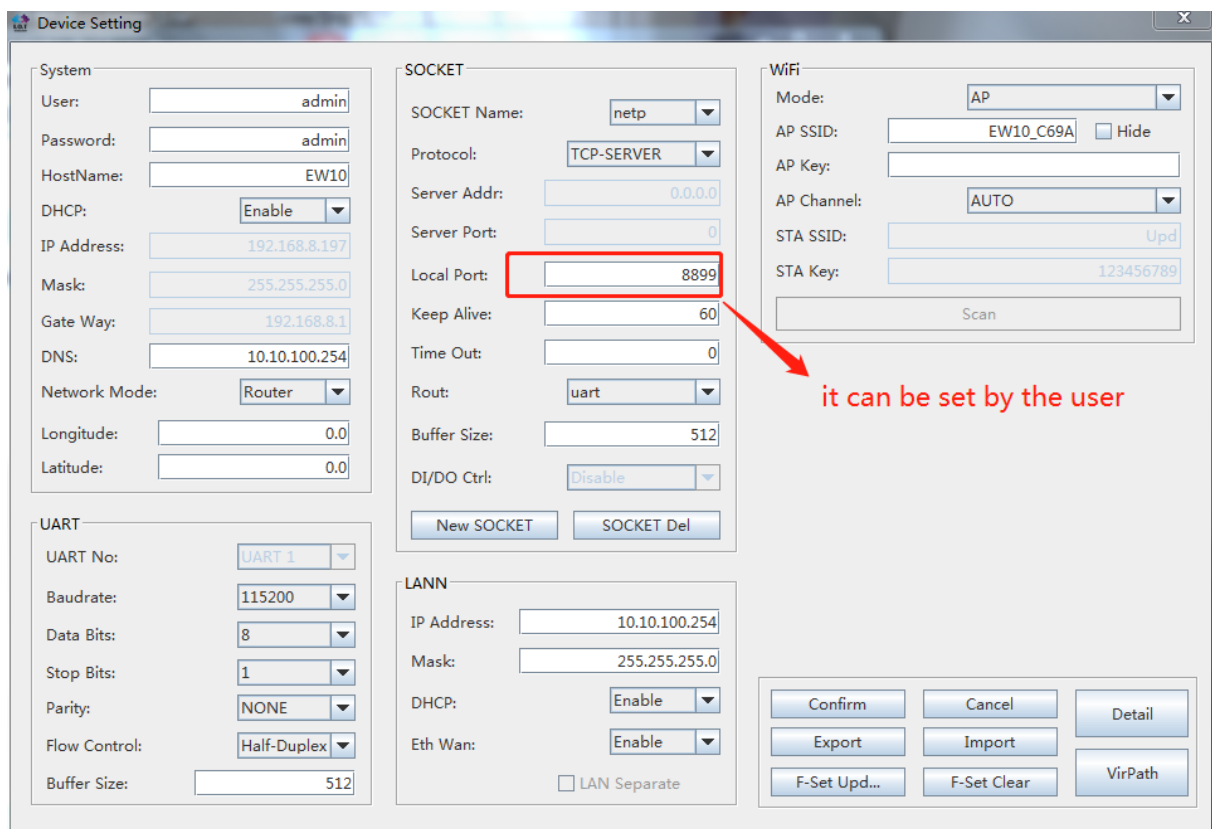

Step 3: Open IOTService and find the device. The device will allocate IP address to the STA connected. STA device IP address will be like 10.10.100.XXX.

5.2. TCP Server Test in AP Mode

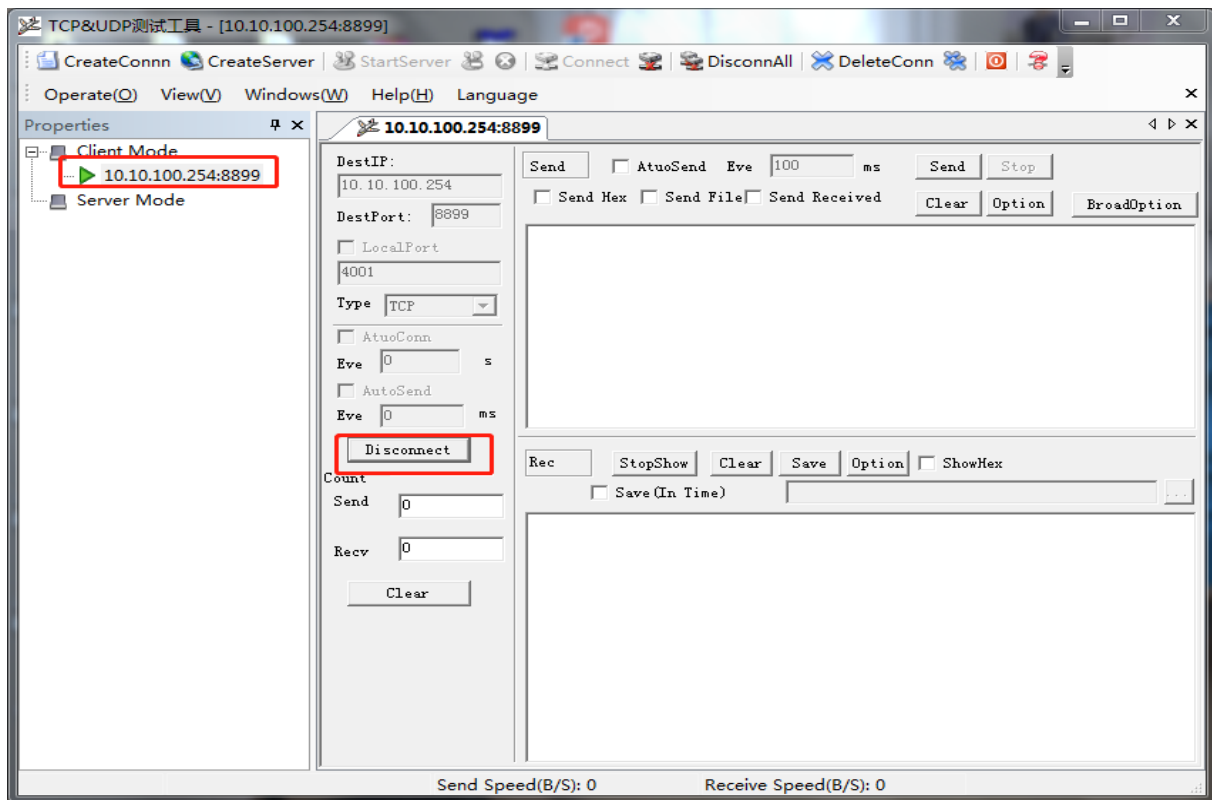

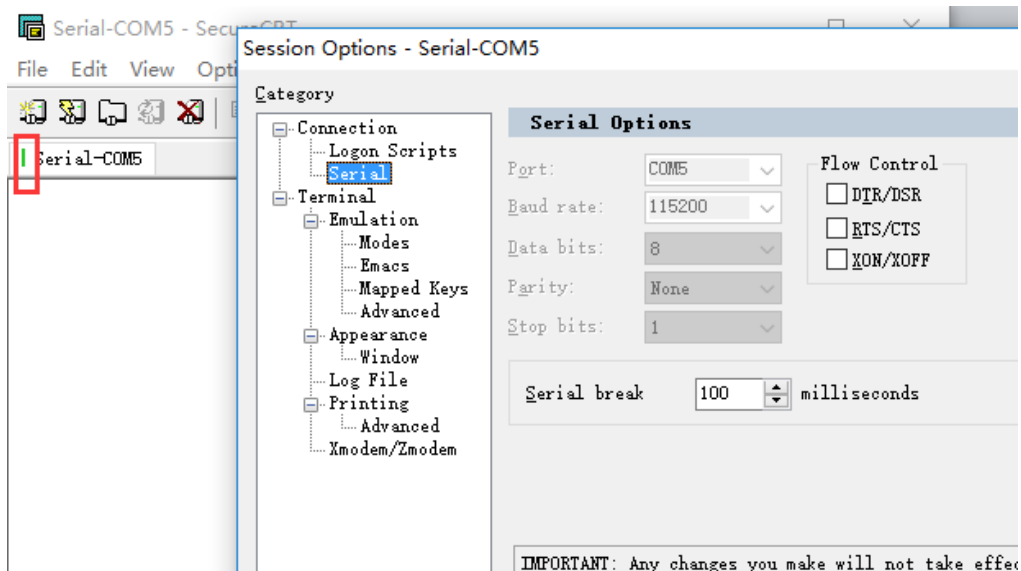

Step 1: Open TCP&UDP test tool and generate TCP connection as following steps. Device has already created a TCP Server (port 8899) for use. TCP&UDP test tool can be downloaded from our website:

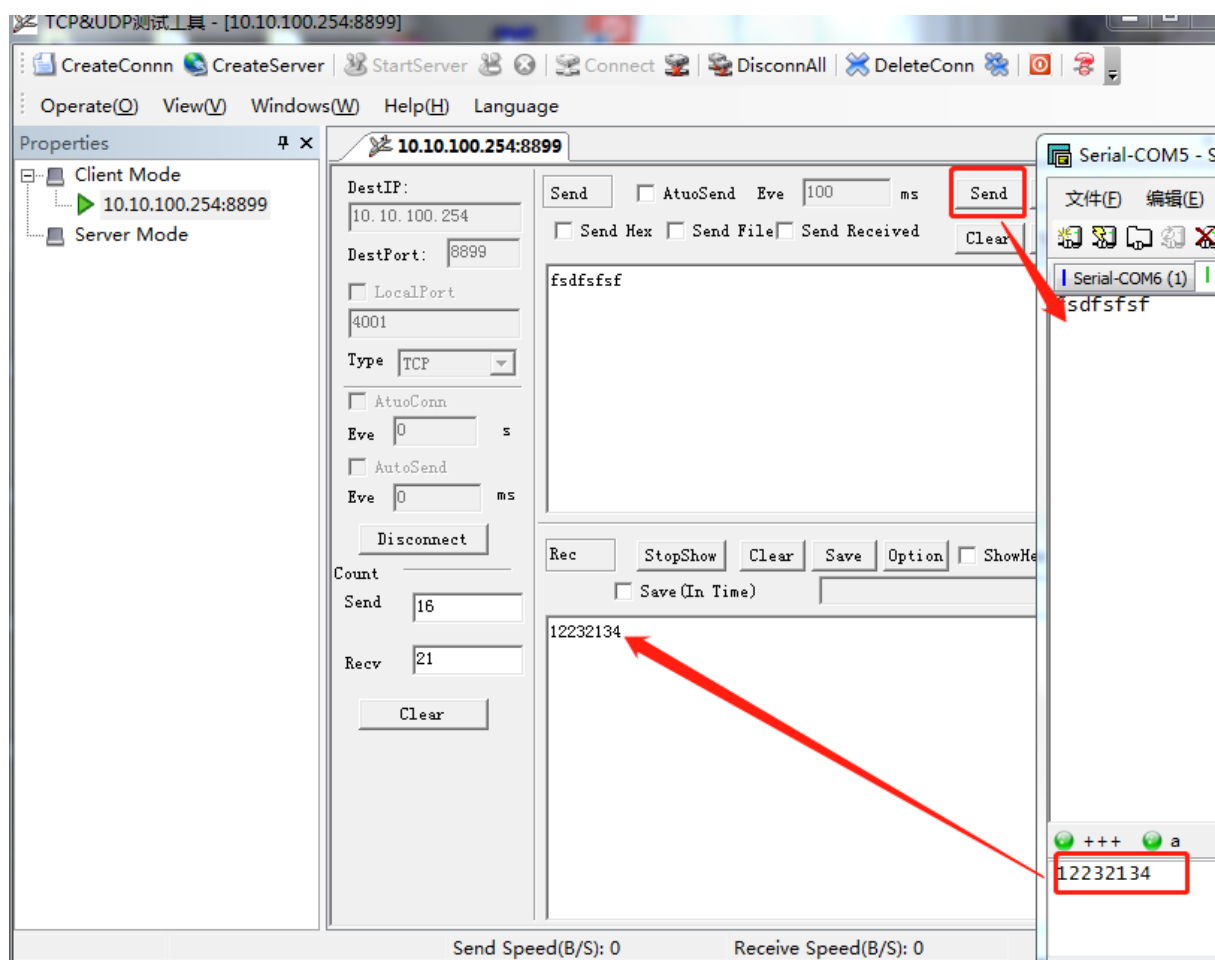

- DestIP: IP address of device which can be found by IOTService.
- Port: Port of TCP Server which can be found by IOTService or set by users own.

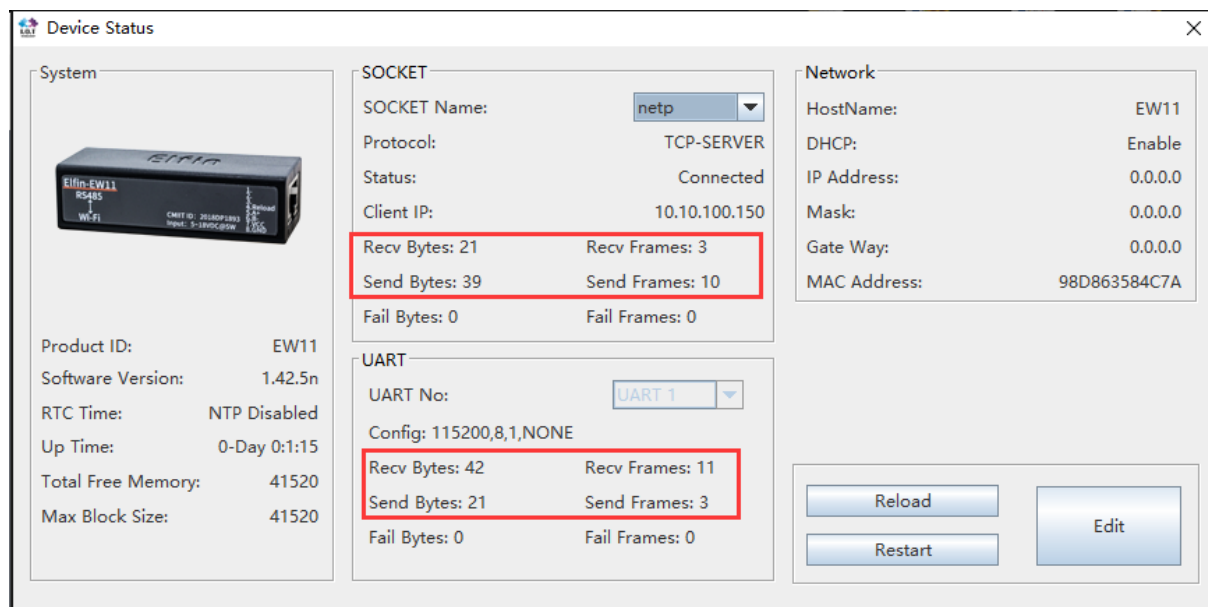

Step 2: Click Connection to generate TCP connection

- After successful connection, the left turns to be green arrow, yellow if fails.

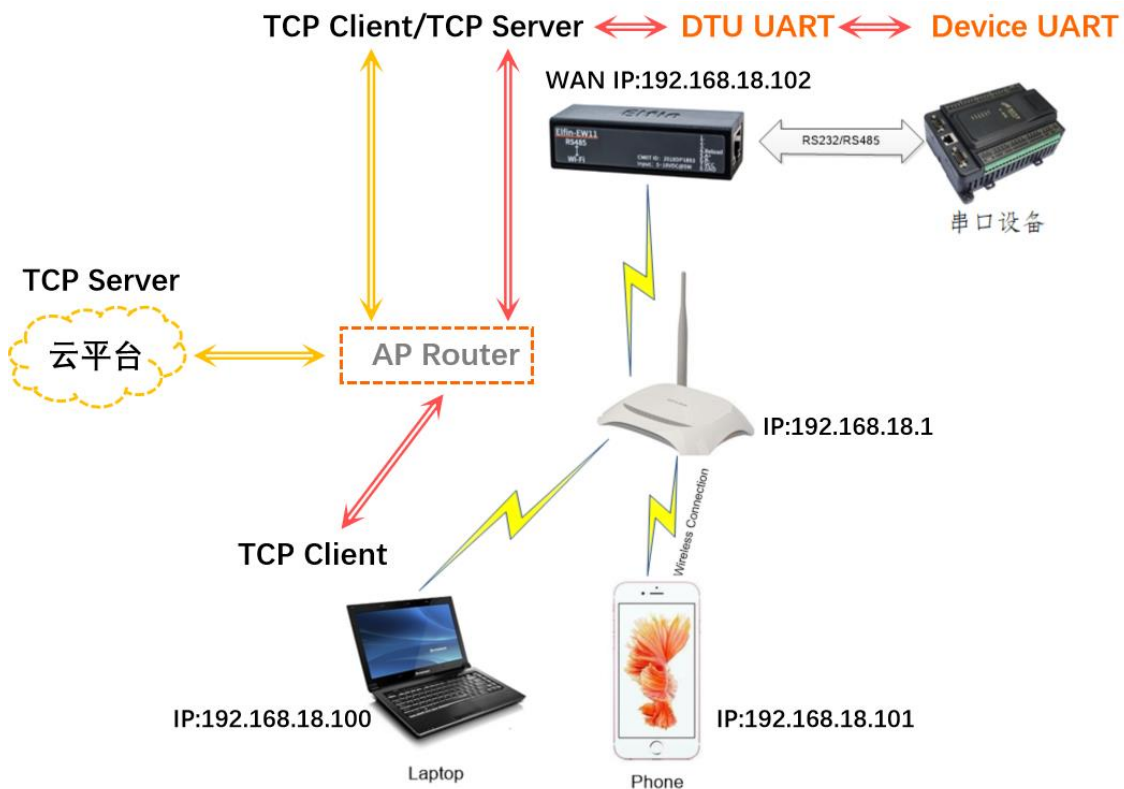

**Step 3: Open serial tool according to following parameters (115200 baud rates as default)****Step 4: Data transmission between TCP and UART is as following.**

Step 4: Data count in following status.

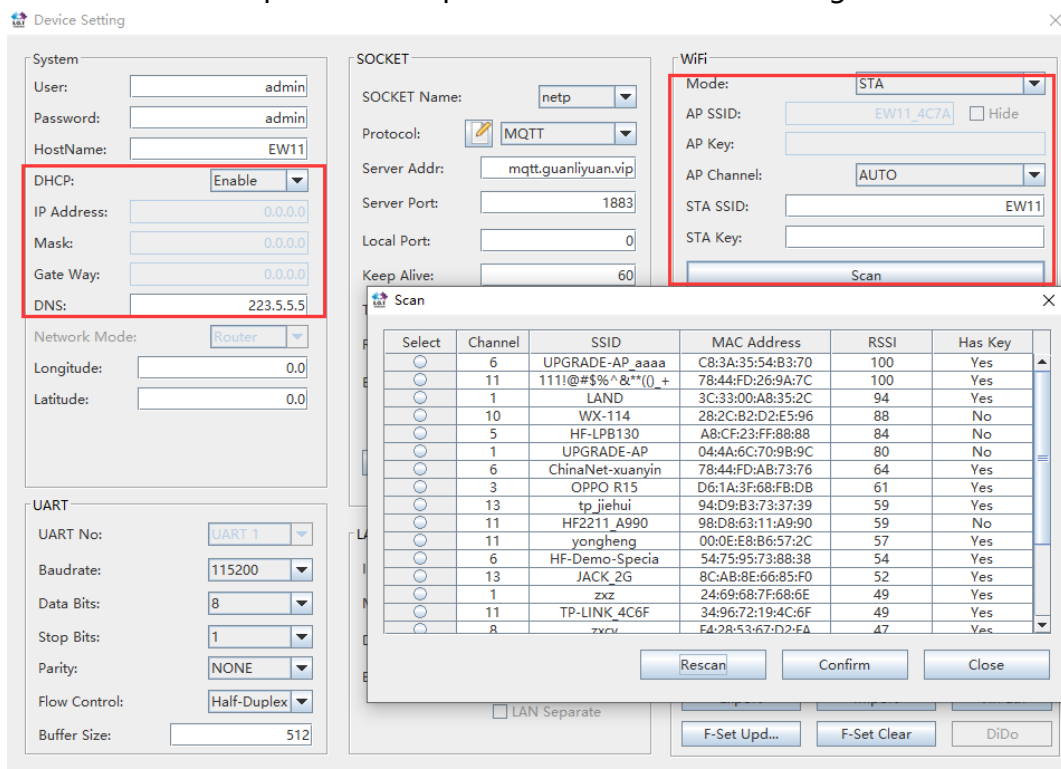

5.3. STA Wireless Networking

Elfin-EW1X is AP mode by default. If need to work in STA mode connecting to router. There are following ways. Recommend to set to STA mode only ,if AP is not used in mass application ,for test stage, may set to APSTA for convenience

- PC Wi-Fi connect to product AP, open IOTService tools to config.

Reboot after setting.

WiFi Rssi 100		

- SmartLinkV8 APP to config, smart phone connect to Router. Set product Reload pin to low for some time($0.2s < \text{time} < 1.5s$) to make it in Smartlink config mode(green LED will be in fast flash status). See appendix Smartlink V8 APP for detail. The following is the final device find step for IOS and Android. After the Smartlink config succeeded,

the product works in STA mode and connect to router.

Note: This method is very easy to config, but may encounter failure sometimes. Do as following to try again.

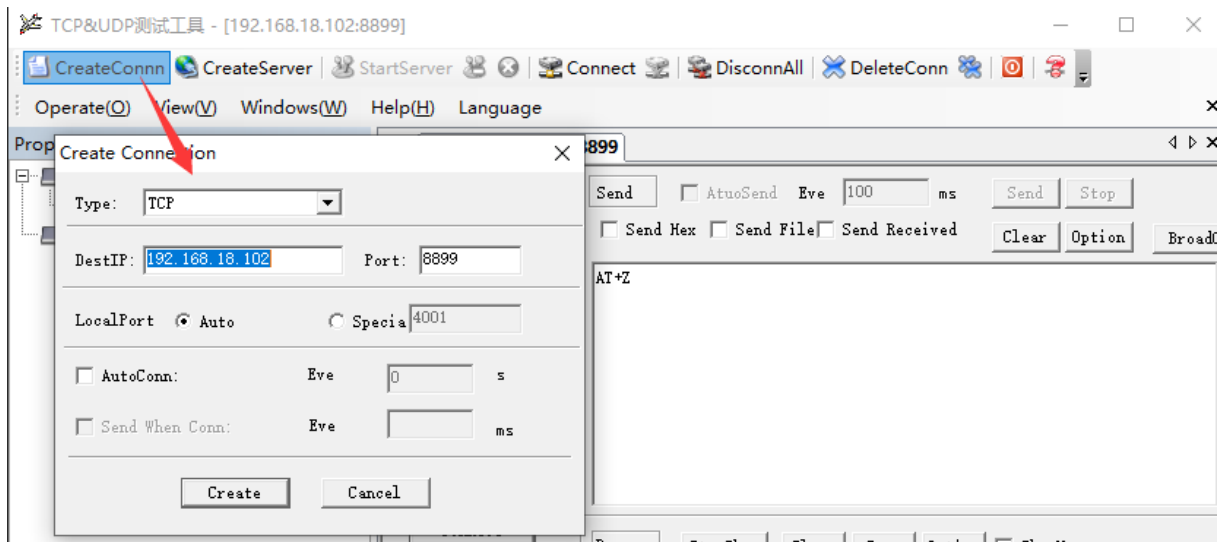

- Check if phone connect to 2.4G router SSID.
- Set router 2.4G Wi-Fi to 802.11bg

5.4. TCP Server Test in STA Mode

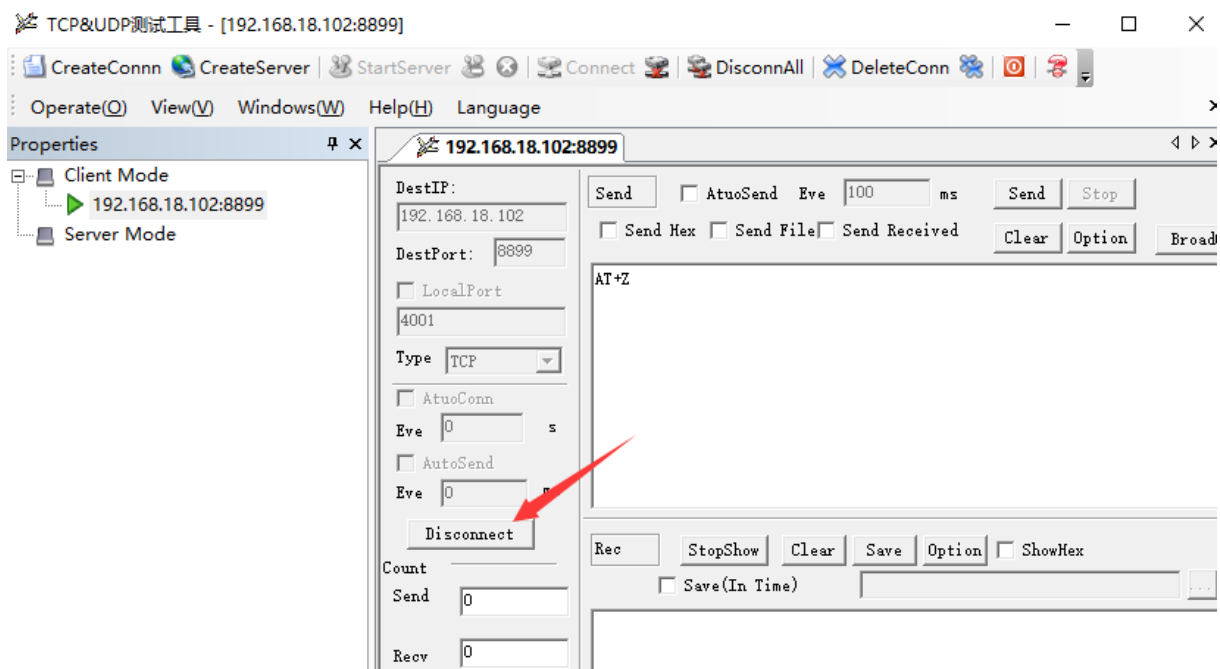

Open TCP&UDP test tool and generate TCP connection as following steps. Device has already created a TCP Server(port 8899) for use. TCP&UDP test tool can be downloaded from the website:

- DestIP: Destination IP address.
- Port: Destination Port.

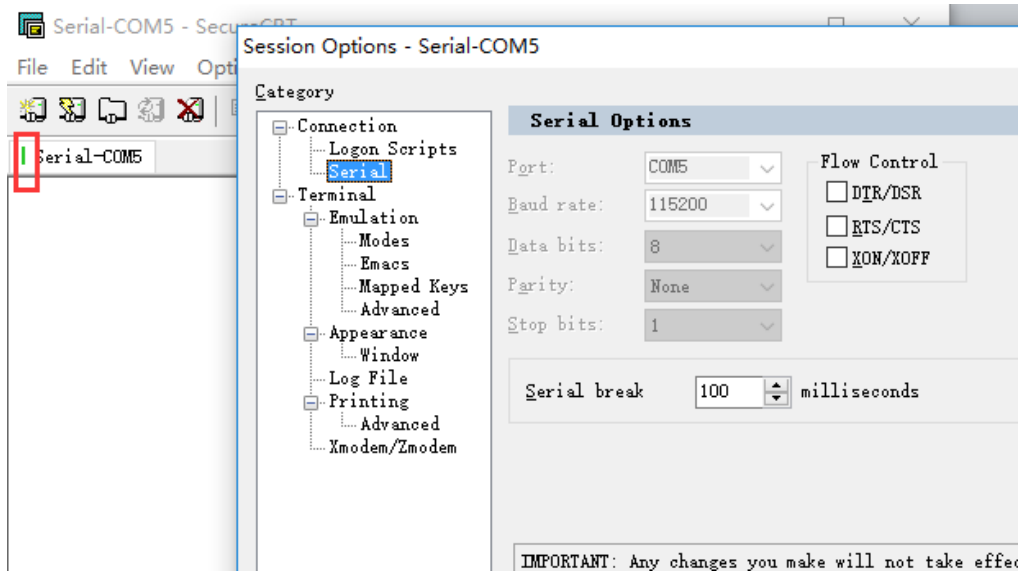

Click Connect to create TCP connection

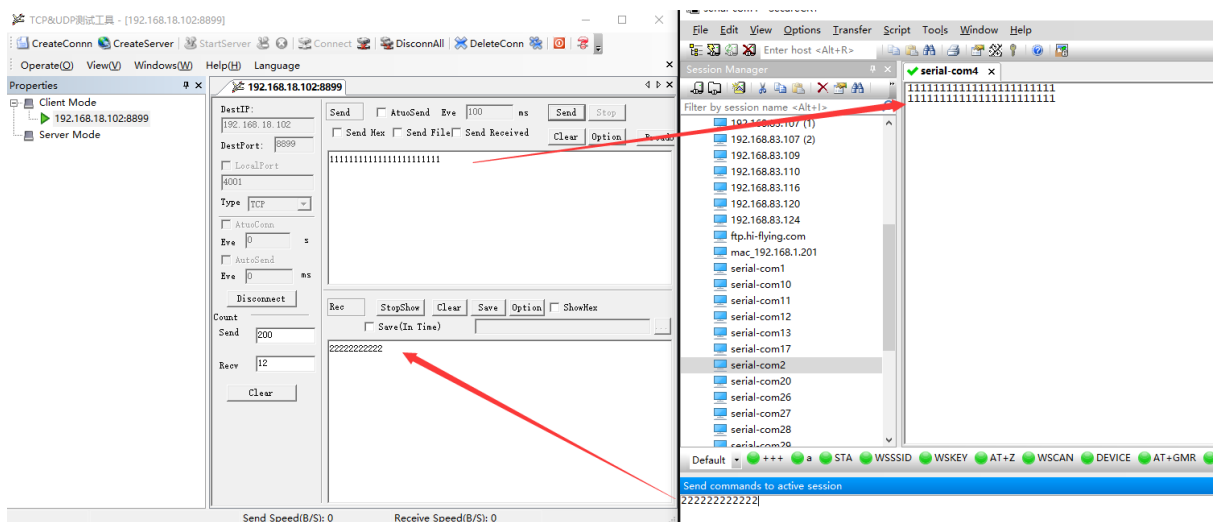

➤ After successful connection, the left turns to be green arrow.

Open serial tool according to following parameters (115200 baud rate as default)

Data transmission between TCP and serial port.

5.5. STA TCP Client Test

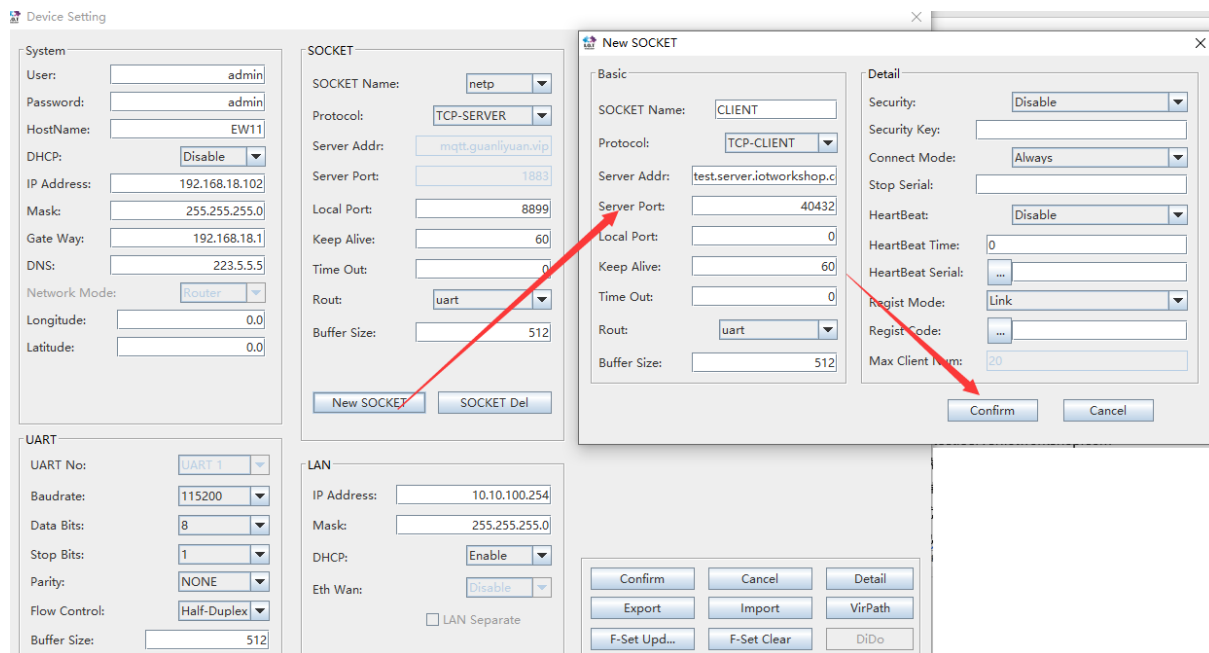

Products support 3 channel sockets, default netp socket works as TCP Server, here create another socket working as TCP client.

HF test server: test.server.iotworkshop.com

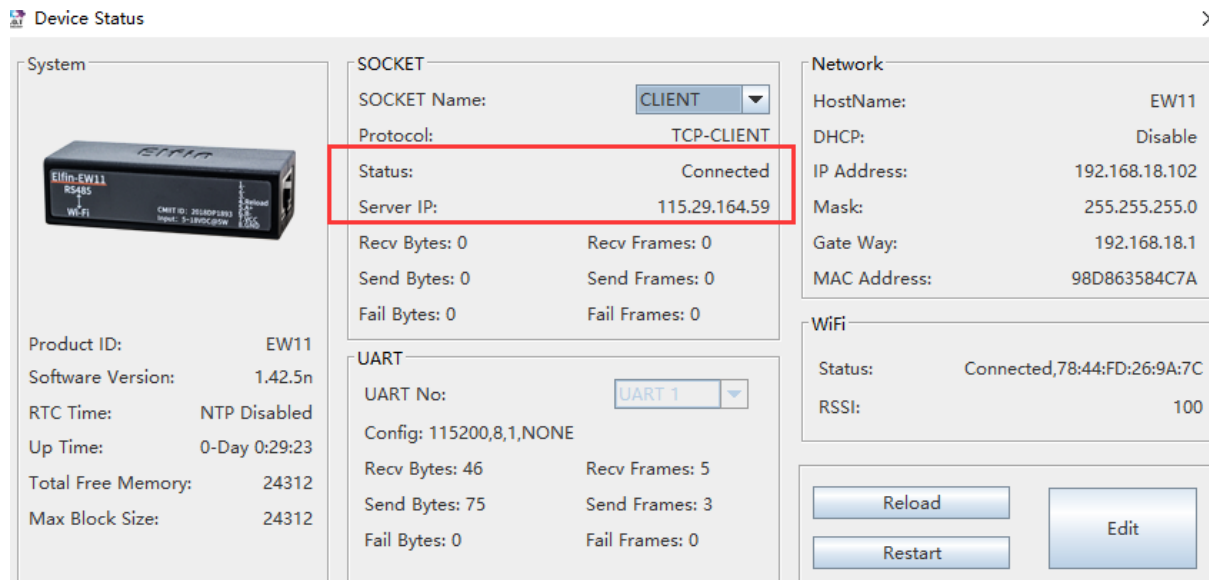

TCP Port: 40432

UDP Port: 40431

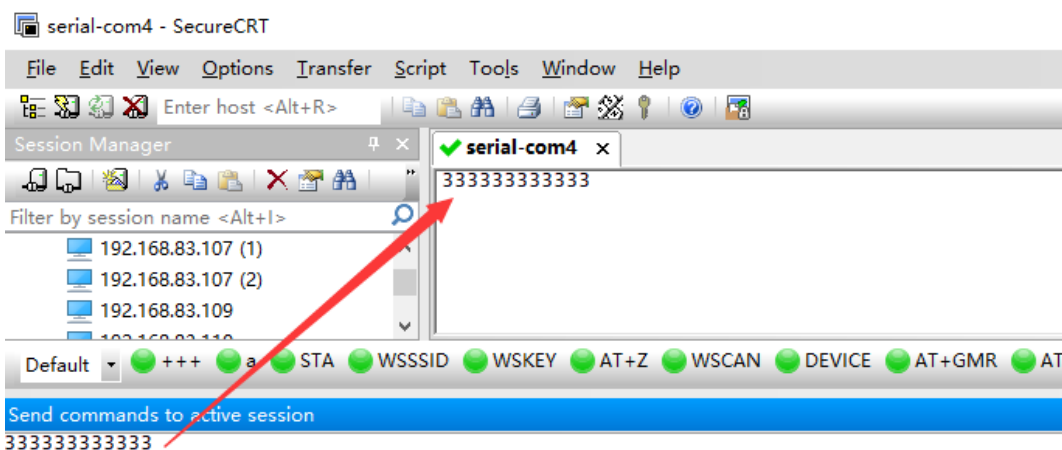

Our test server will send back the received data.

It shows connected.

UART received "333333333333" and send to server, the server sent back the packet, so the UART tools shows the received data.

Product ID: EW11

5.6. STA HTTP Client Test

HTTP data flow is as following.

● HTTP GET Test:

Test server address: 115.29.164.59

Test server port: 8432

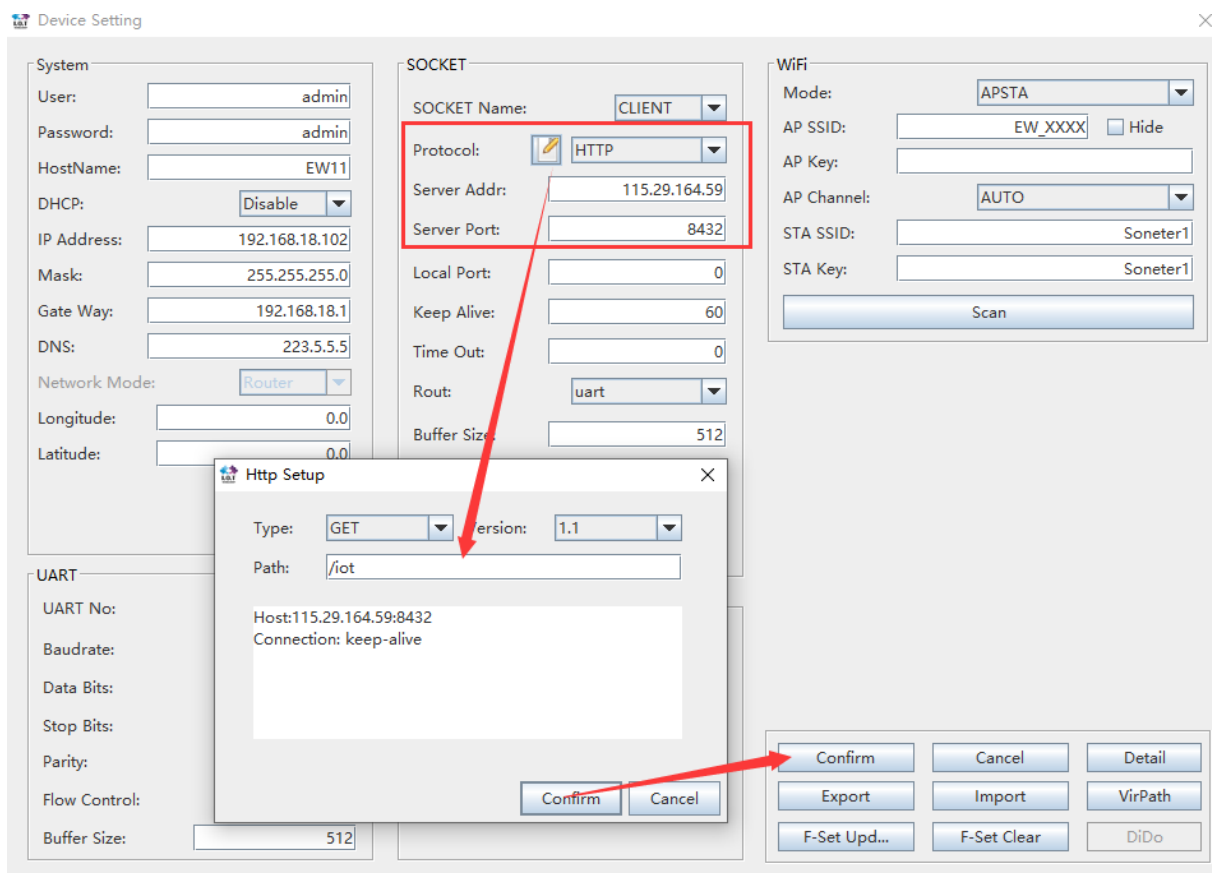

Path: /iot

Header:

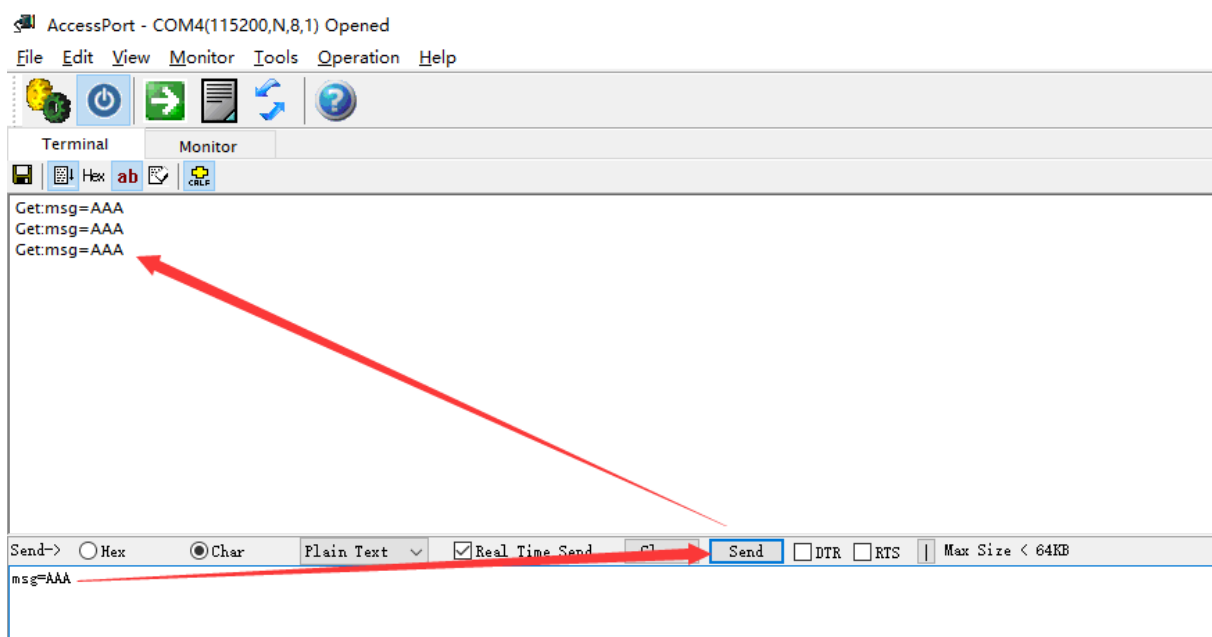

Host:115.29.164.59:8432

Connection: keep-alive

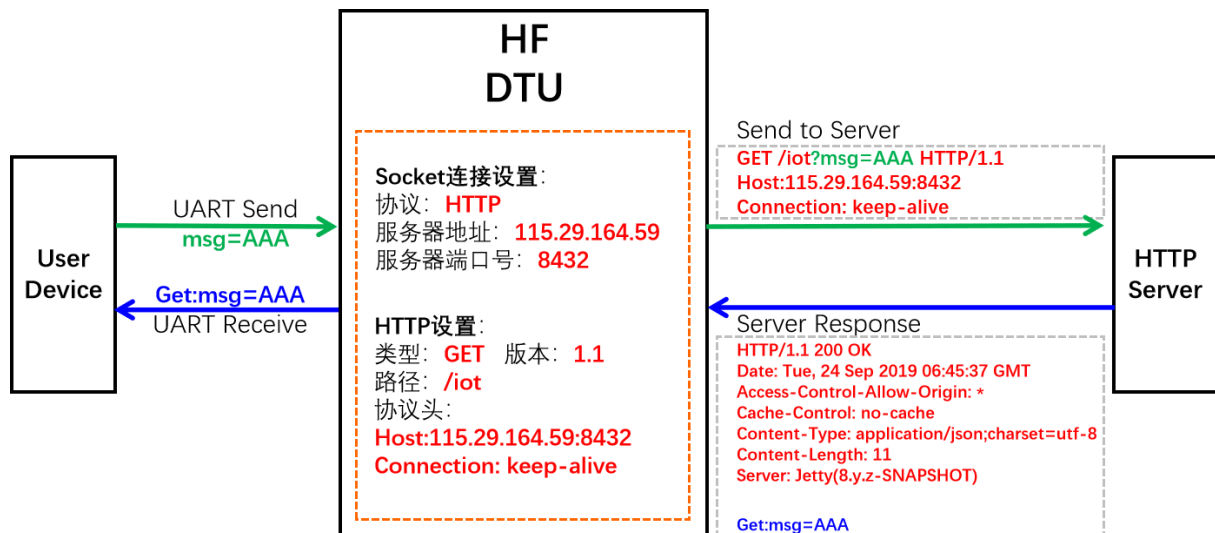

Products setting as following.

Server response back and products UART output packet. It filter the HTTP response header and only output the header.

Data flow is as following.

● HTTP POST Test:

Test server address: 115.29.164.59

Test server port: 8432

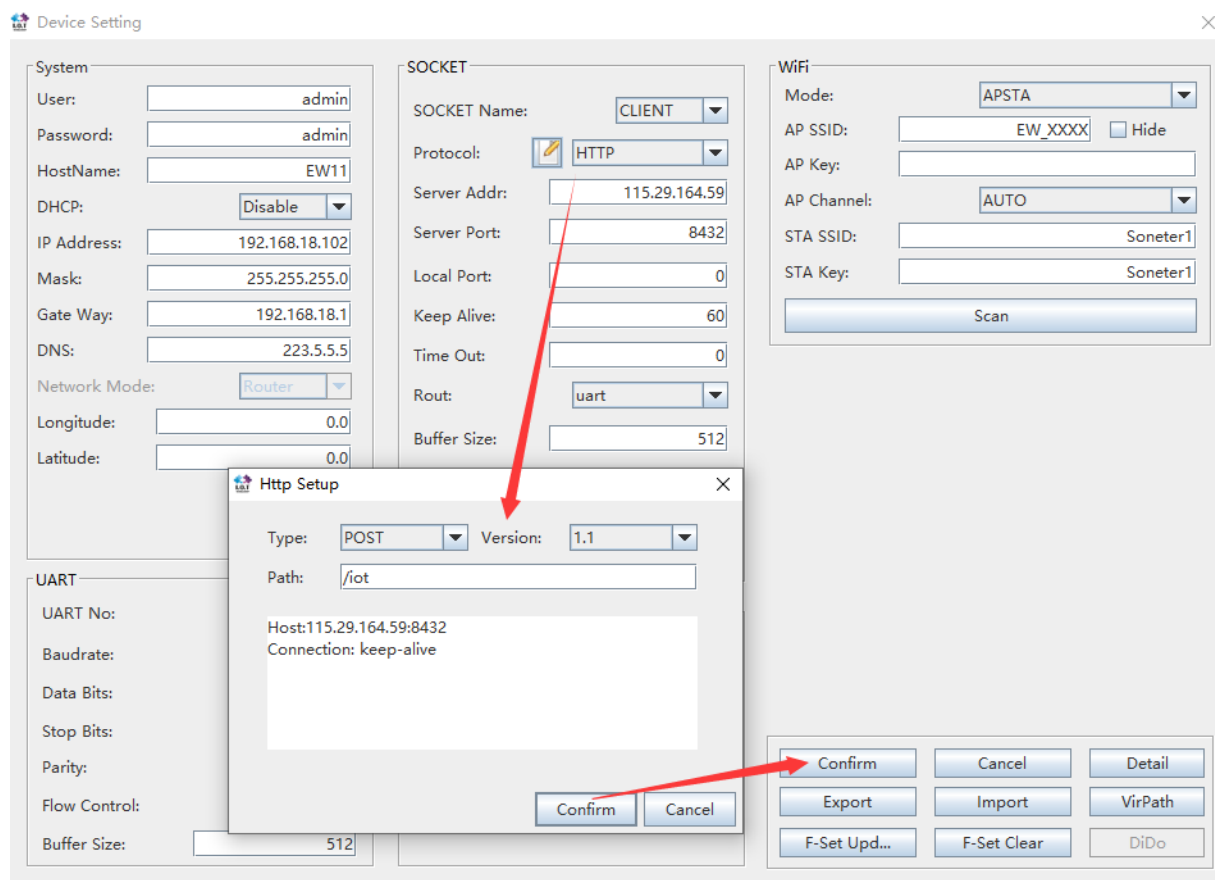

Path: /iot

Header:

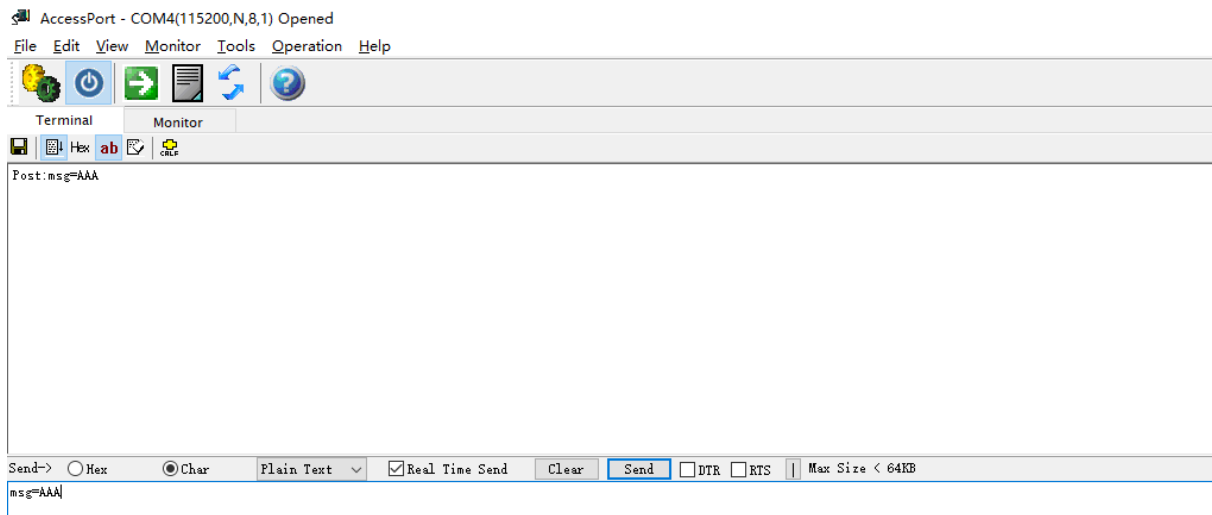

Host:115.29.164.59:8432

Connection: keep-alive

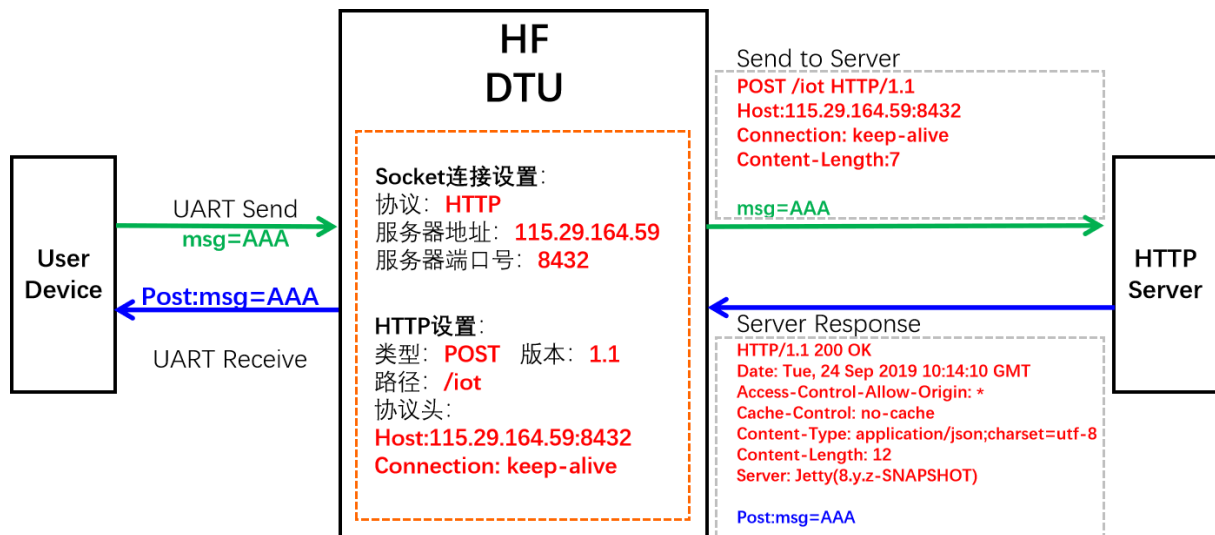

Products setting as following.

Server response back and products UART output packet. It filter the HTTP response header and only output the header.

Data flow is as following.

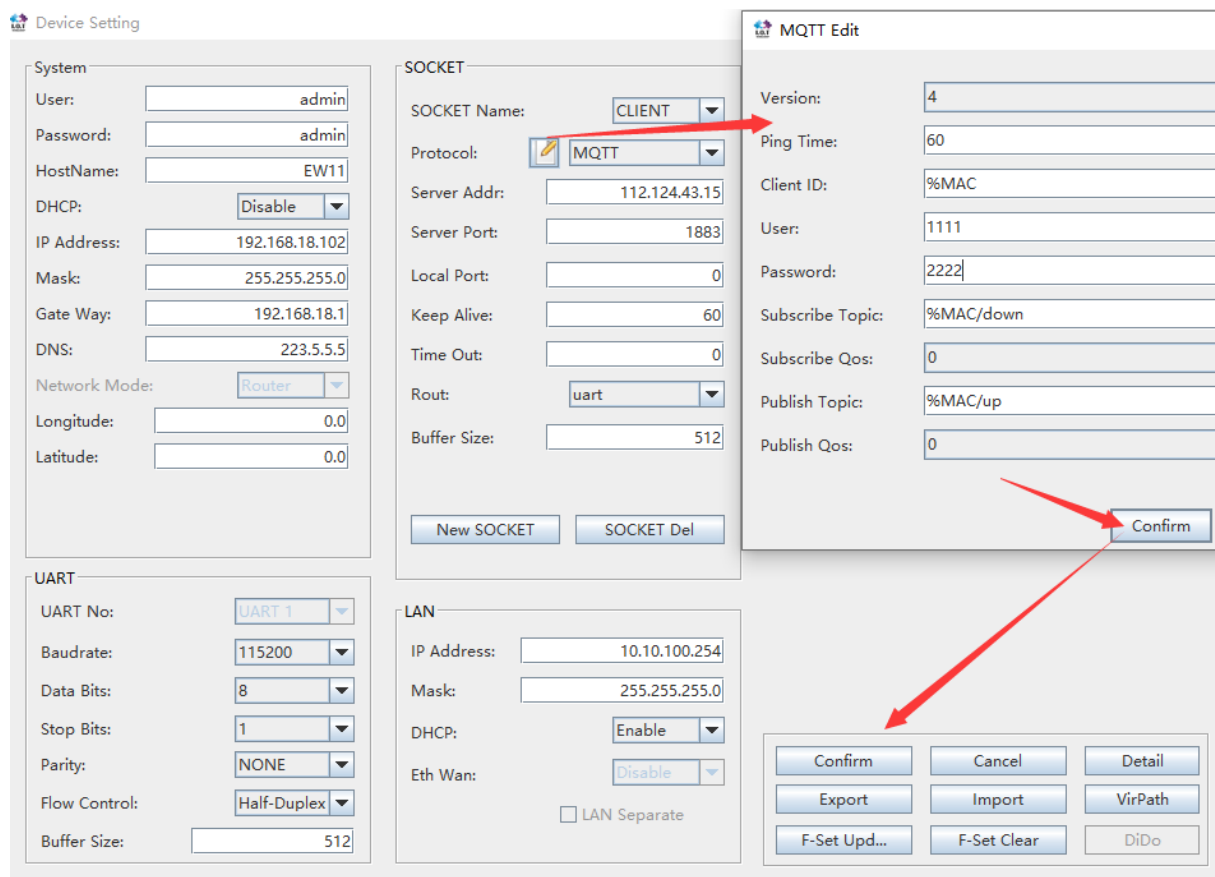

5.7. STA MQTT Client Test

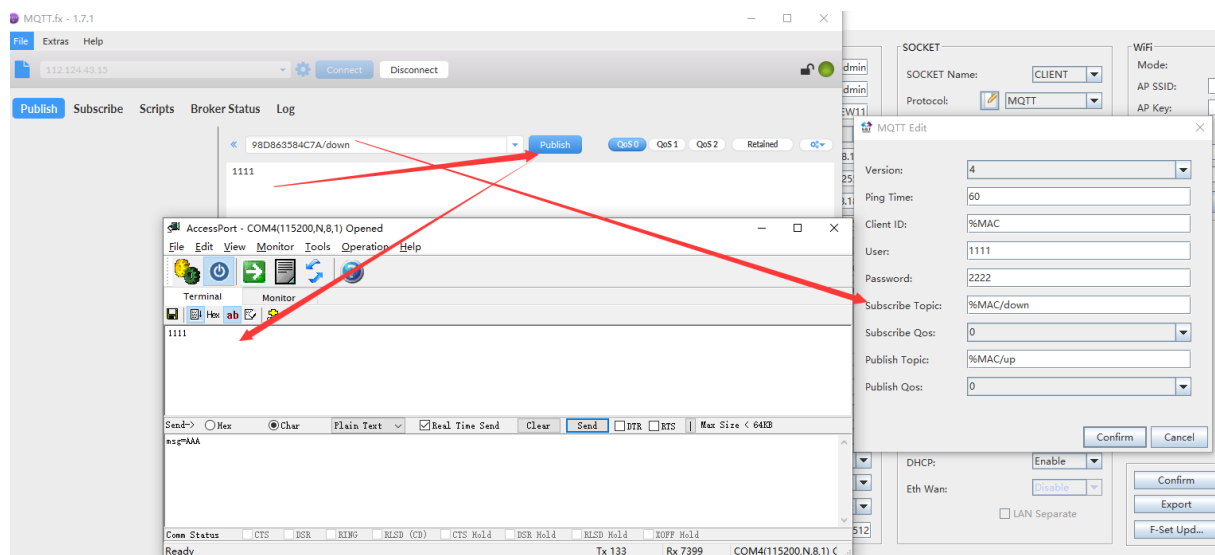

Test server address: 112.124.43.15

Test server port: 1883

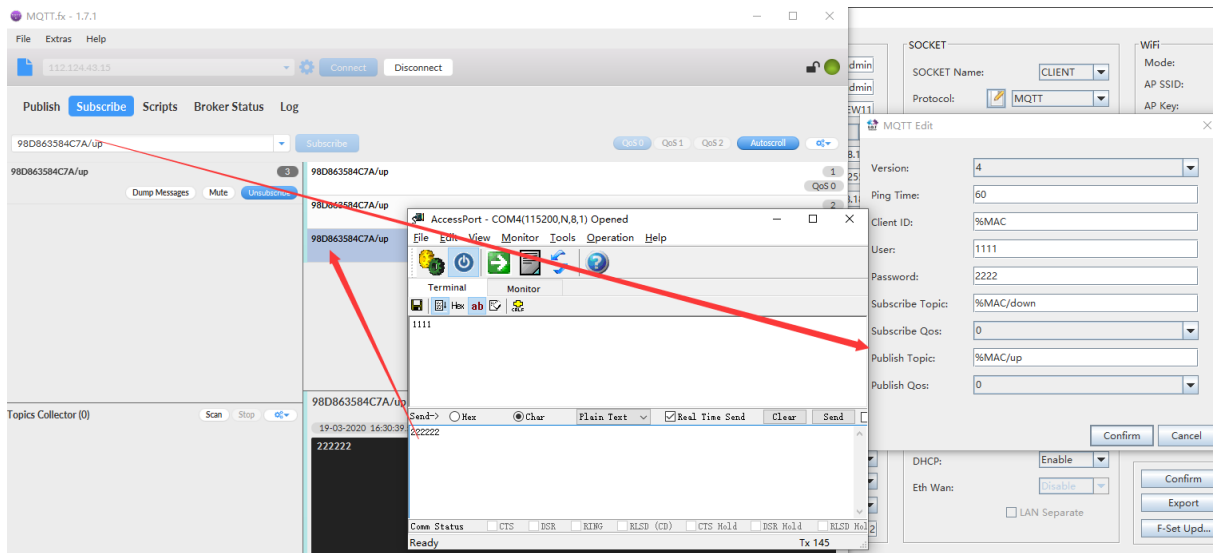

Device setting is as following.

Use MQTT.fx tools to test, set publish topic to the device Subscribe Topic and the publish data will be sent to device UART.

Set tools subscribe topic to the device publish topic and the send UART data, the MQTT.fx tools got the packet.

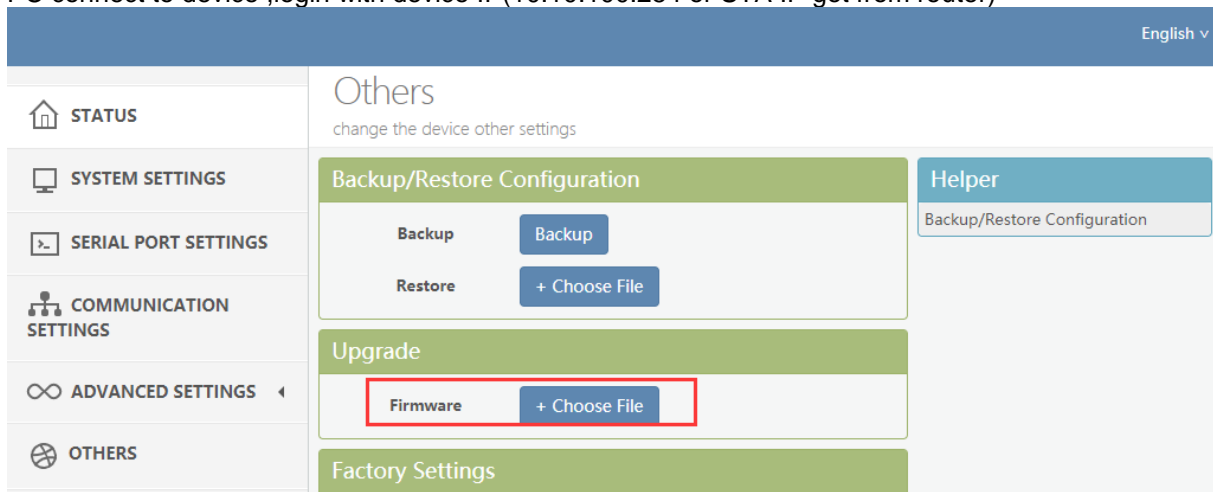

5.8. Firmware Upgrade

Firmware download address:

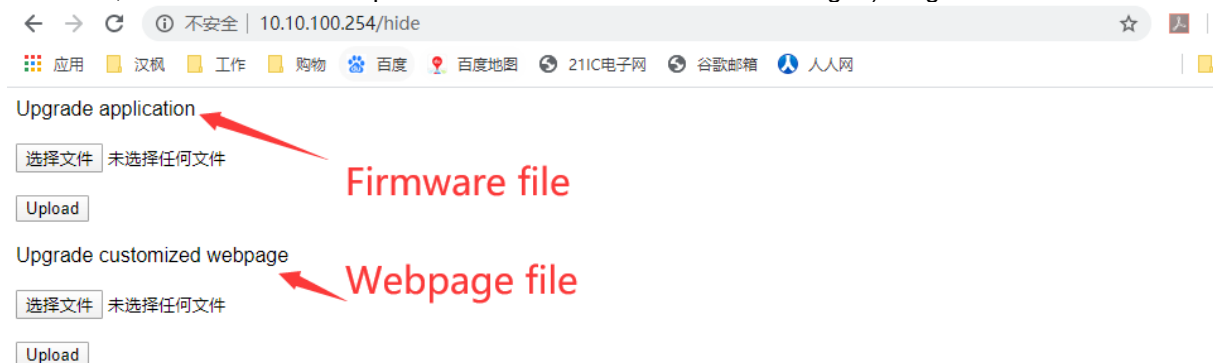

http://www.hi-flying.com/index.php?route=download/category&path=1_3

- **Webpage Local Upgrade:**

PC connect to device ,login with device IP(10.10.100.254 or STA IP got from router)

There is another internal webpage for upgrade the firmware and webpage (external config webpage as above, this source code is open at our website for customer to change). Login with IP/hide.

- **IOTService Remote Upgrade:**

Refer to IOTService doc for remote upgrade.

5.9. Restore to Factory Setting

If device works in STA mode and not yet connect to router AP, do the following operation to recover and reconfig.

- **UART Cli command to reload**

- **nReload button to restore to factory setting.**

nReload Pin (Button) function:

1. After module is powered up, short press this button (0.2< "Low" <1.5s) and loose to make the module go into "SmartLink" config mode, waiting for APP to set password and other information. (See Appendix to download SmartLink APP).
2. After module is powered up, long press this button ("Low" > 4s) and loose to make the module recover to factory setting.

5.10. More Application Case

See following for more.

<http://www.hi-flying.com/download-center-1/application-notes-1/download-item-industry-products-application-manual-20180415>
